Curves and Curve Geometry

2 characteristics of curves

Elevation

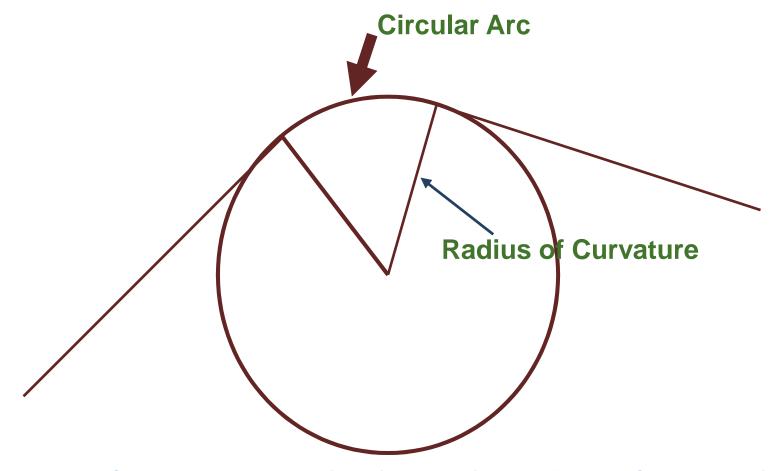

Alignment

Definition of a Curve

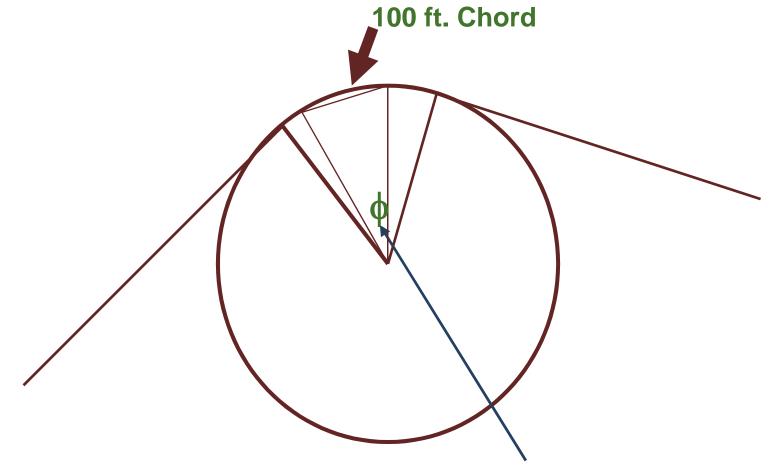

A curve is defined as a path along the edge of a circular arc defined by a circle of with a given radius

Railroad Definition of a Curve

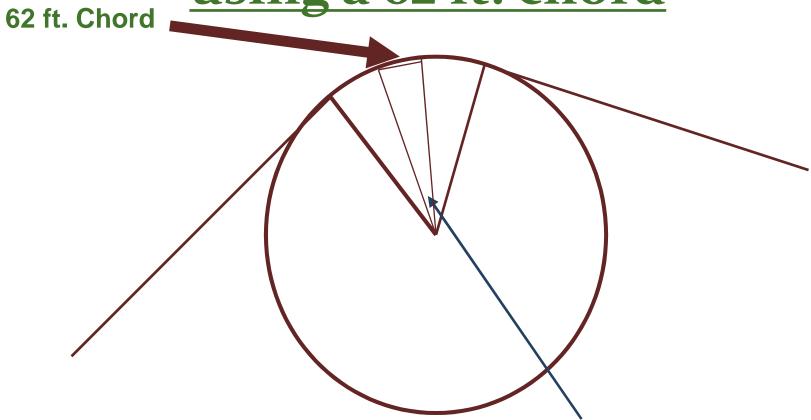

Degree of curve is the angle ϕ subtended by a 100 ft. chord

Estimating degree of curvature using a 62 ft. chord

Degree of curve can be estimated by using a 62 ft. chord and measuring the mid-ordinate offset

Midordinate offset in inches is approximately equal to the degree of

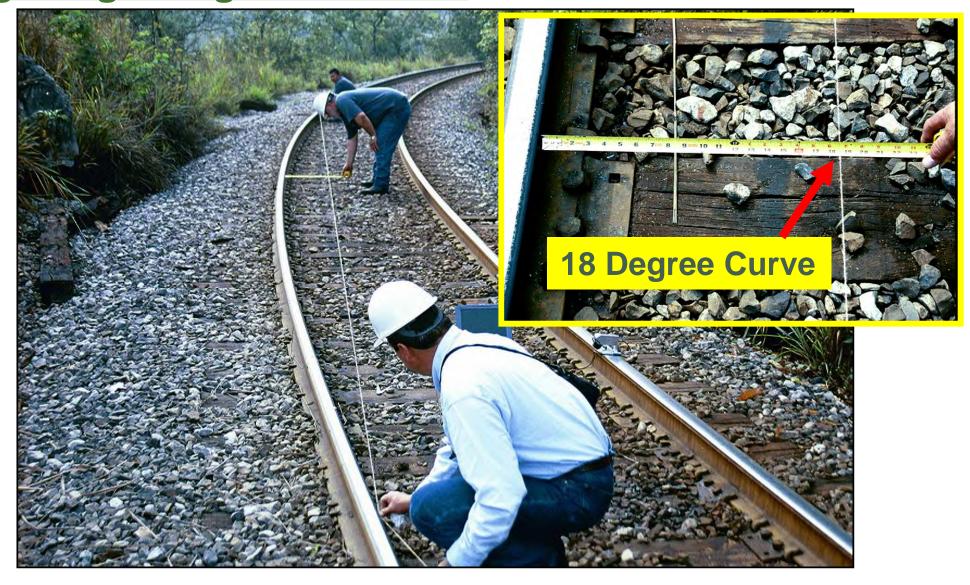

62 ft. Chord 3" mid-ordinate offset would be equal to a 3 degree curve Estimating degree of curvature using a 62 ft. chord

curve

Stringlining using 62 ft. Chord

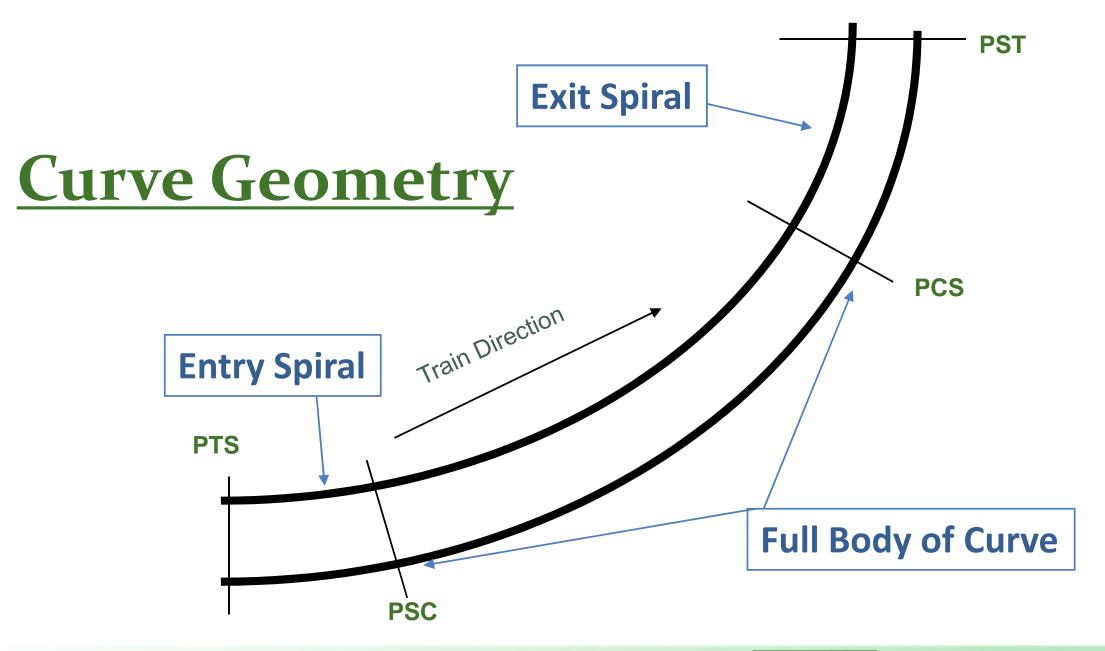

Degree of Curve & Radius

Degree of Curve	Mid-Ordinate of a 62' Chord 1"	Radius of Curve 5730'
2	2"	2865'
3	3"	1910'
5	5"	1146
10	10"	573'

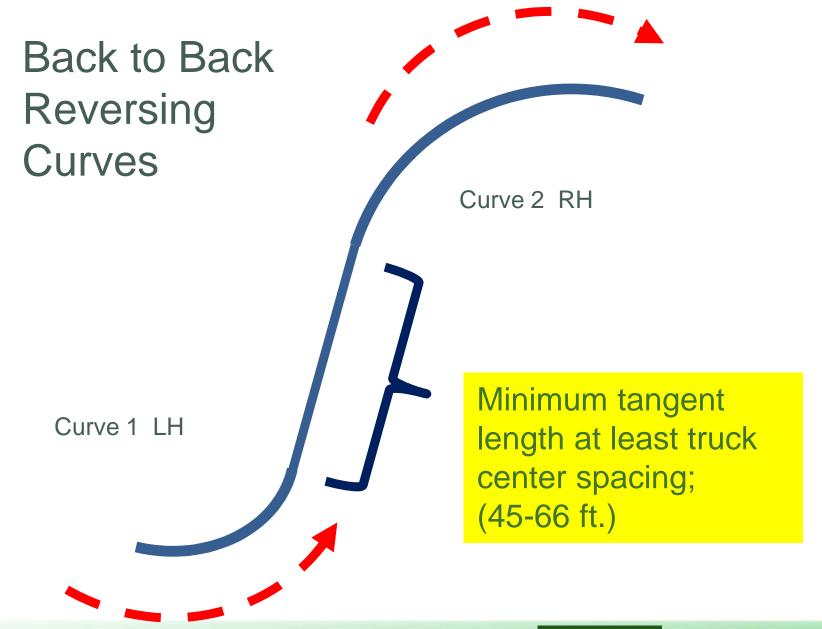

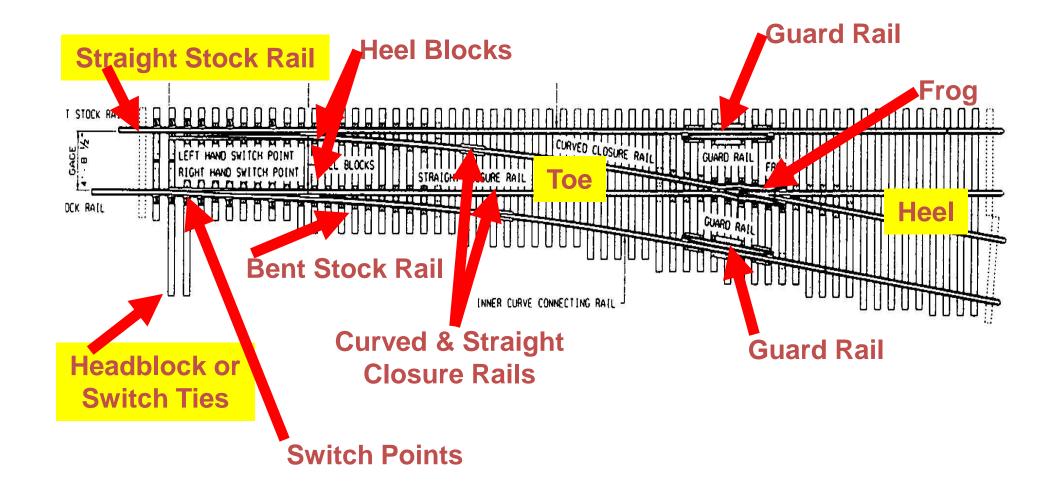

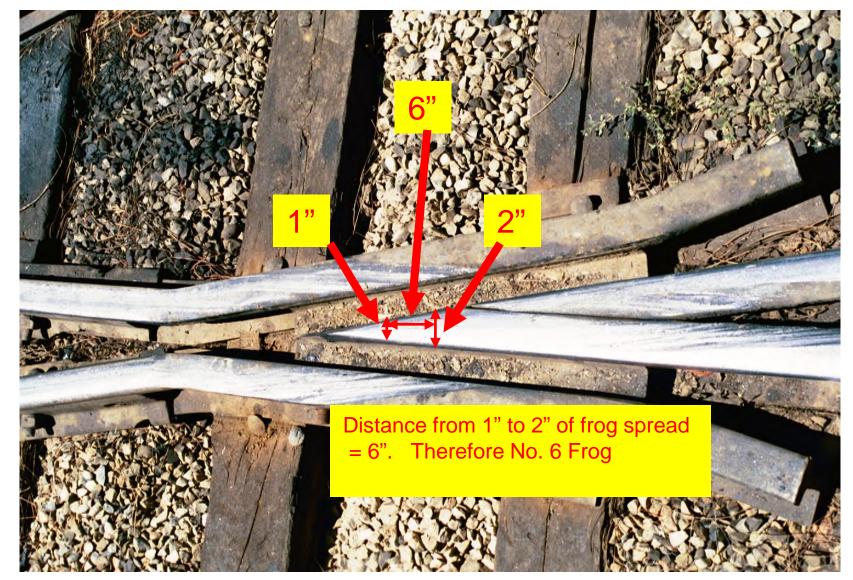

How to determine frog number

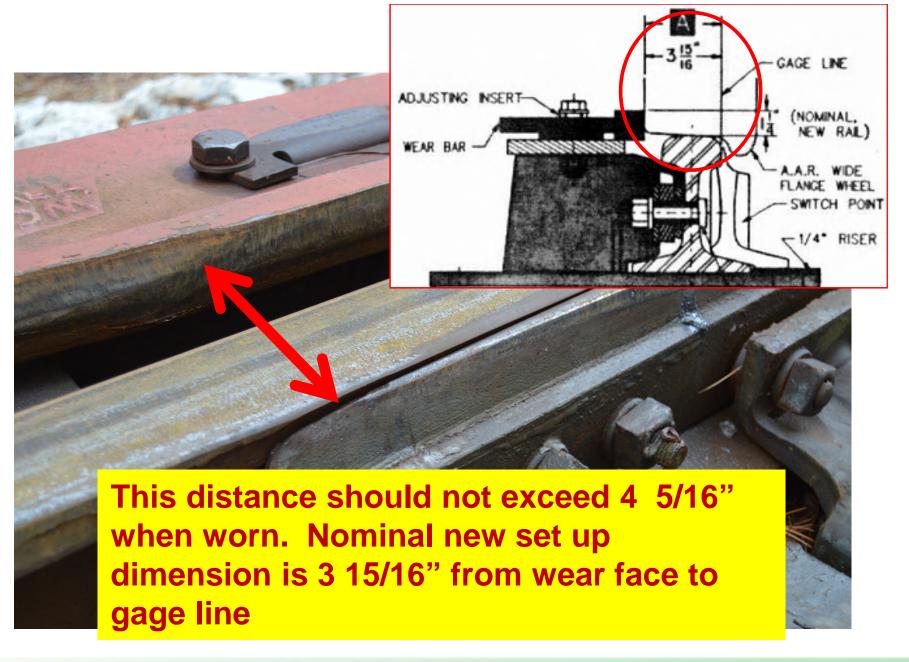

Heavy wear on switch point protector

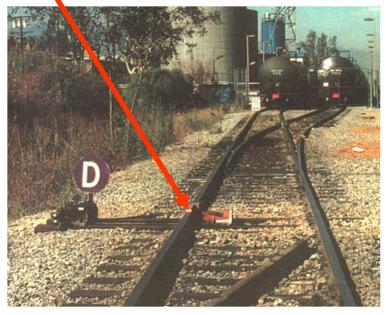

§ 213.205 Derails.

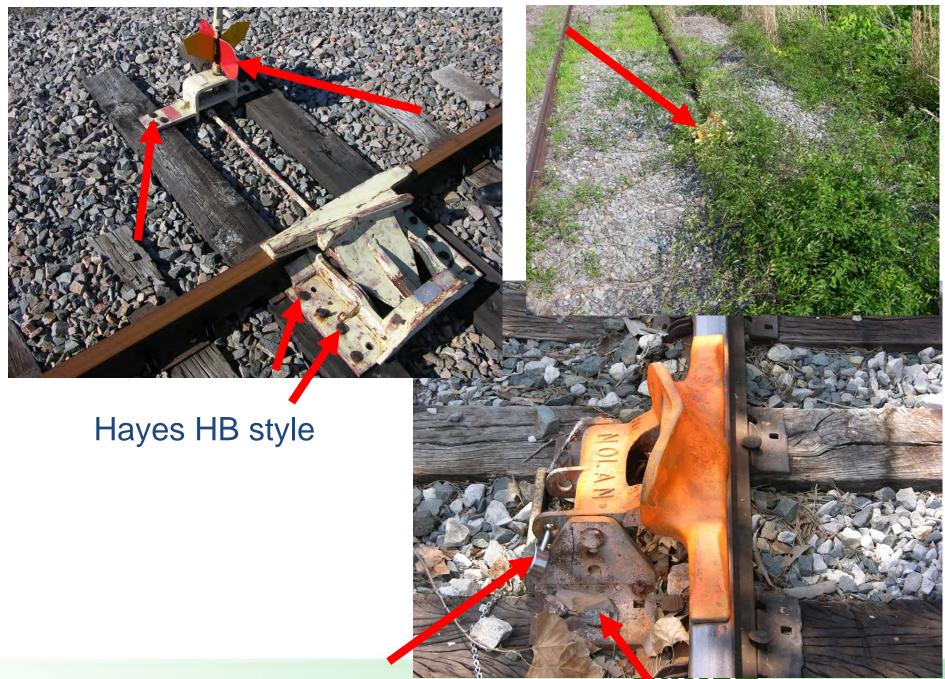

DERAILS

- (a) Each derail shall be clearly visible.
- (b) When in a locked position, a derail shall be free of lost motion which would prevent it from performing its intended function.
- (c) Each derail shall be maintained to function as intended.
- (d) Each derail shall be properly installed for the rail to which it is applied. (This paragraph (d) is applicable September 21, 1999.)

Gage and Alignment Variations

Crosslevel and Alignment Variations

Surface and Profile Deviations

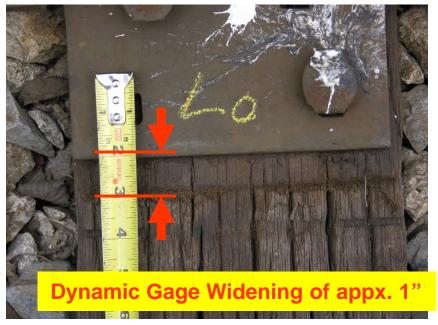

§ 213.13 Measuring track not under load.

When unloaded track is measured to determine compliance with requirements of this part, the amount of rail movement, if any, that occurs while the track is loaded must be added to the measurements of the unloaded track.

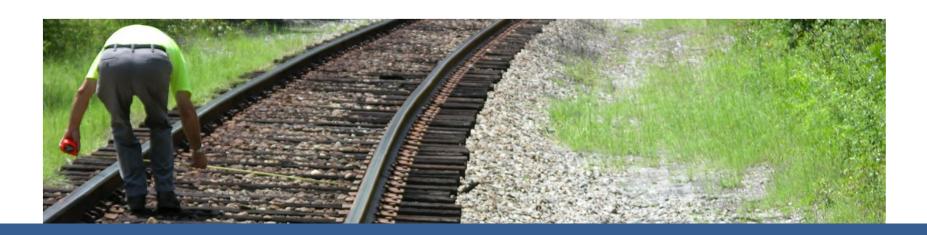

For North American Freight Operations

CLASSES OF TRACK

80	OPERATING SPEEDS (MPH)				
CLASS	1FREIGHT		2 PASSENGER		
	FROM	TO	FROM	TO	
1	1	10	1	15	
2	11	25	16	30	
3	26	40	31	60	
4	41	60	61	80	
5	61	80	81	90	

§ 213.53 Gage.

- (a) Gage is measured between the heads of the rails at right-angles to the rails in a plane five-eighths of an inch below the top of the rail head.
- (b) Gage shall be within the limits prescribed in the following table —

Class of track	The gage must be at least—	But not more than—
Excepted track	4'8" 4'8"	4'10" 4'9¾"

Gage – Distance between the rail heads measured 5/8" below top of rail

56 ¾" static gage

1/4" dynamic base movement

½" dynamic plate movement

57 ½" total gage for FRA Compliance

1/2" dynamic lateral movement of plate on tie surface

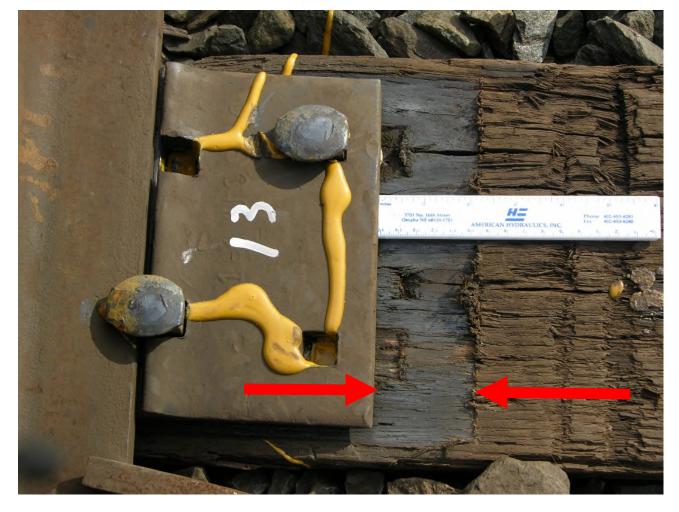

§ 213.13 Measuring track not under load.

When unloaded track is measured to determine compliance with requirements of this part, the amount of rail movement, if any, that occurs while the track is loaded must be added to the measurements of the unloaded track.

1/4" dynamic

Dynamic Gage Widening

Gage 56.5" Base Gage

Rail Wt.	Base Gage	Base Gage
	Decimal(in.)	Fraction(in.)
100	54.16	54 5/32
115	53.96	53 31/32
119	53.91	53 29/32
132	53.77	53 3/4
133	53.69	53 11/16
136	53.72	53 23/32
141	53.72	53 23/32

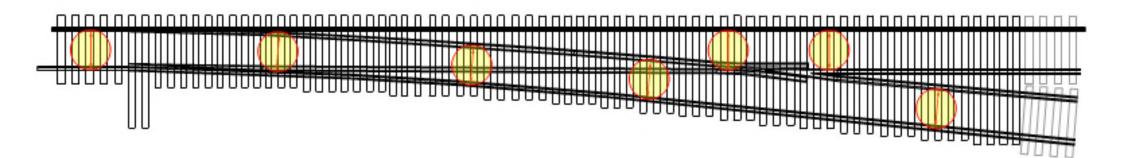

Subpart C - Track Geometry §213.53 Gage

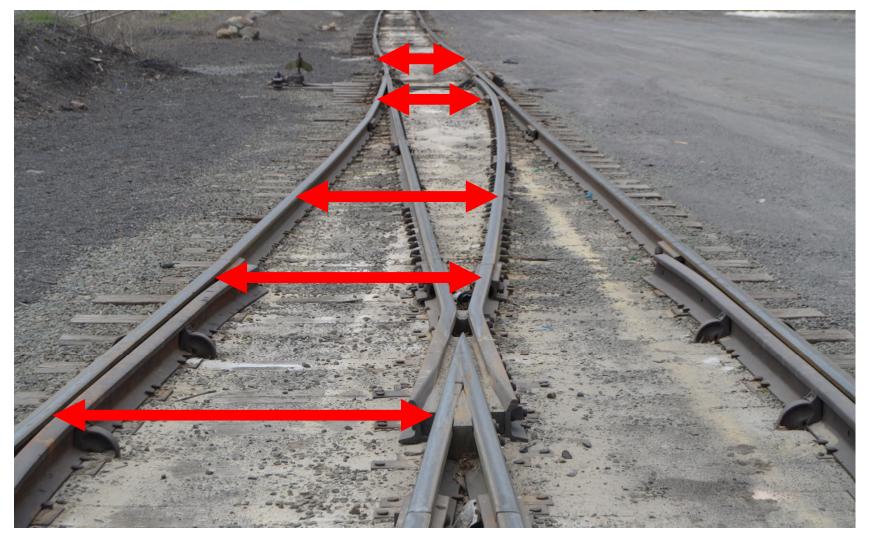

Particular attention should be given to track gage in turnouts or locations where high lateral train forces are expected or evident.

These areas include the curved closure rails, the toe and heel of frogs, the curved track behind the frog and several feet ahead of the switch points.

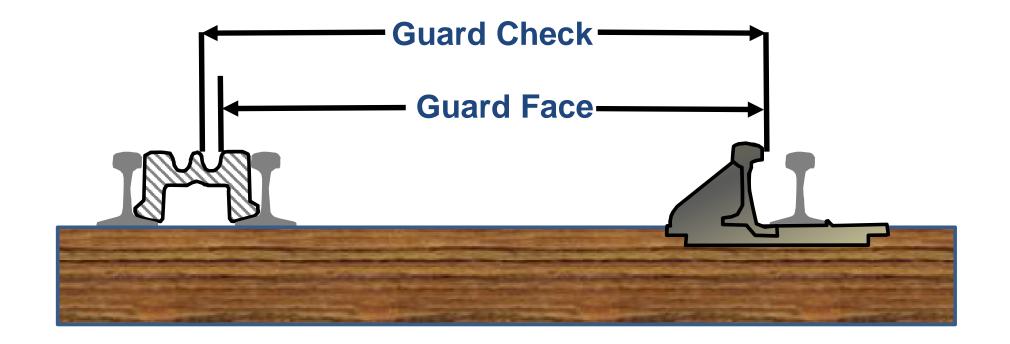

Checking Gage in a Turnout at Multiple locations

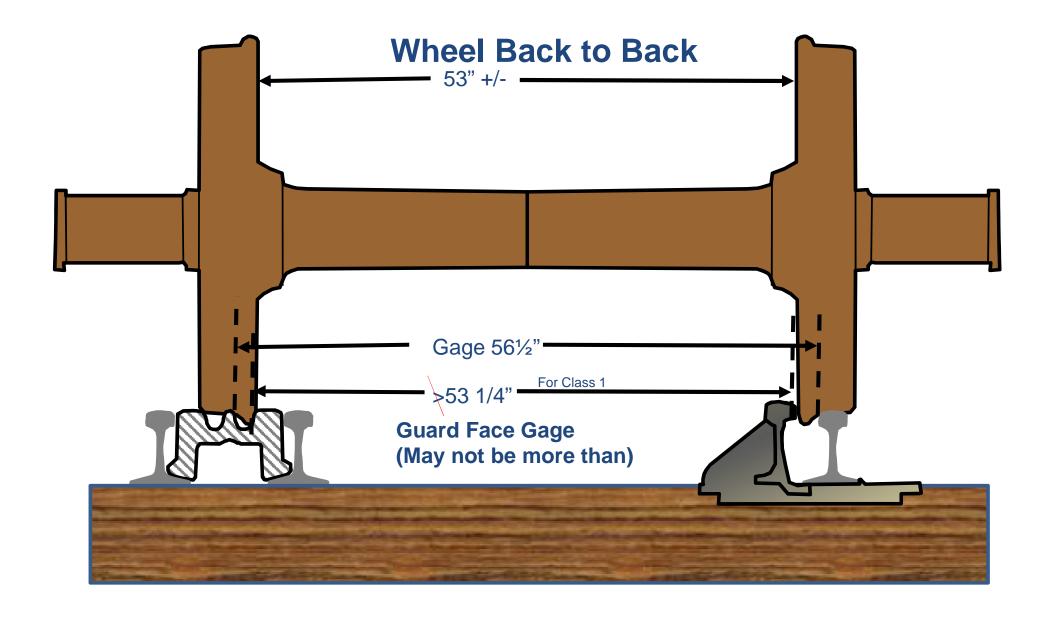

213.143 Guard Check and Face Gage

The guard check and guard face gages in frogs shall be within the limits prescribed by the following table:

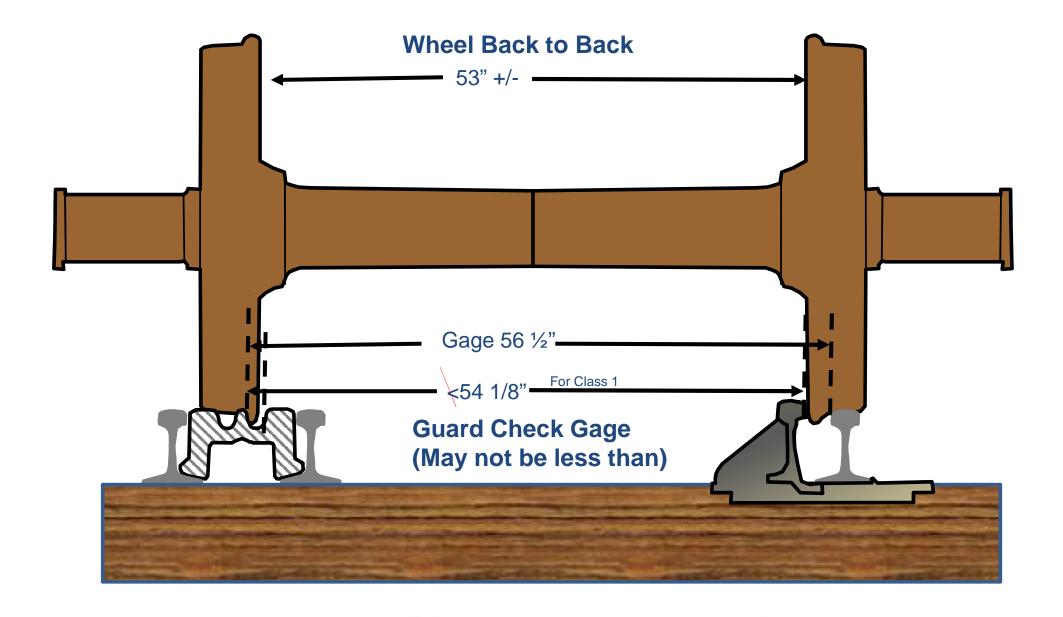

Class of Track	Guard Check gage may not be <u>less</u> than	Guard Face gage may not be more than
Class 1	4' 6 1/8"	4' 5 1/4"
Class 2	4' 6 1/4"	4' 5 1/8"
Class 3 & 4	4' 6 3/8"	4' 5 1/8"
Class 5	4' 6 ½"	4' 5"

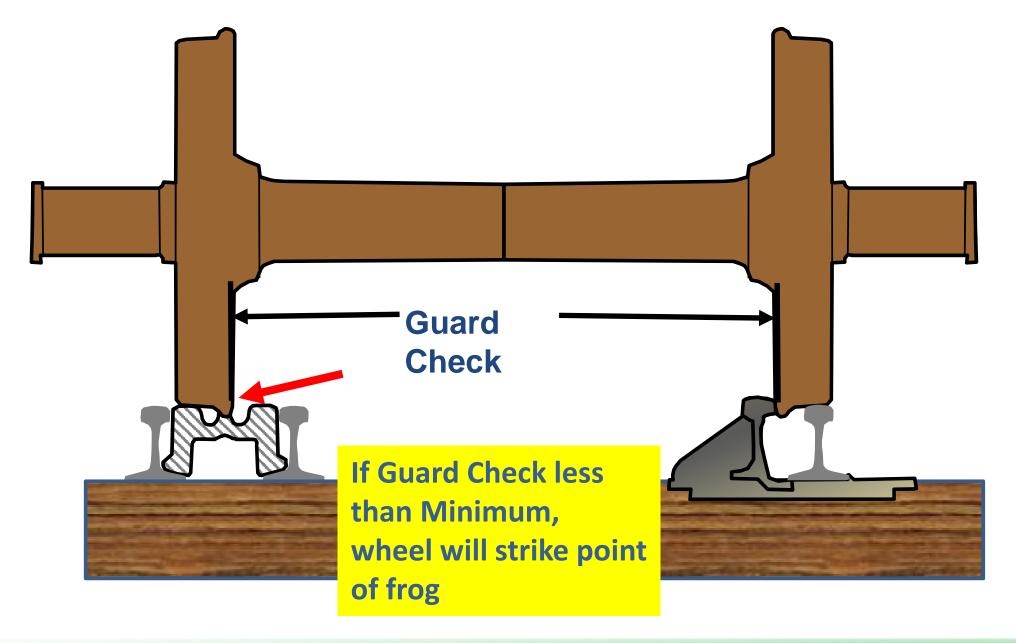

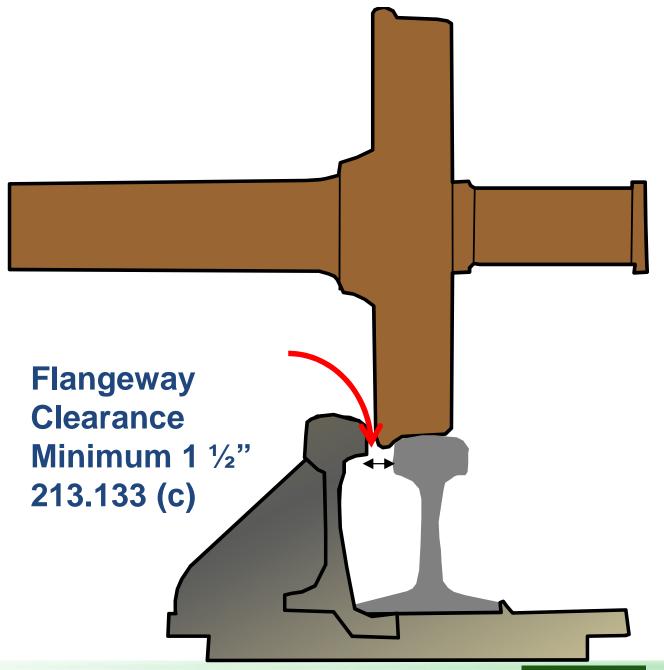

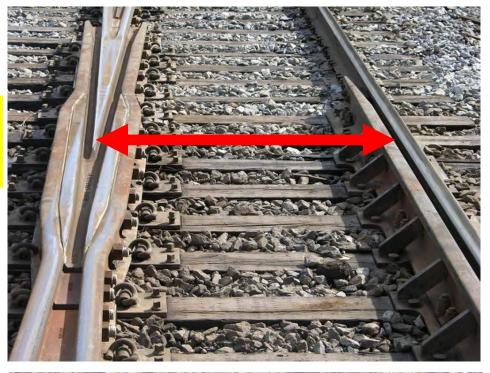

Class 5 Track

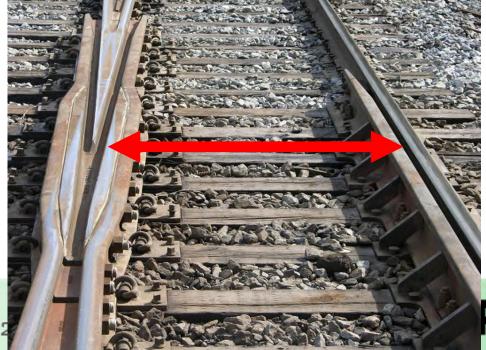

Guard Check- Gage Line of frog to Guard Line

Guard Face Distance
Between Wing
Rail and Guard
Line

Maximum = 53 "

Alignment Deviations

§ 213.55 Track alinement.

(a) Except as provided in paragraph (b) of this section, alinement may not deviate from uniformity more than the amount prescribed in the following table:

Class of Track	Tangent Track	Curved T	ack		
Track.	The deviation of the mid-offset from a 62-foot line [1] may not be more than	The deviation of the mid- ordinate from a 31-foot chord [2] may not be more than	The deviation of the mid-ordinate from a 62-foot chord [2] may not be more than		
1	5"	N/A ³	5"		
2	3"	N/A ³	3"		
3	1¾"	11/4"	1¾"		
4	11/2"	1"	11/2"		
5	34"	1/2"	3/4"		

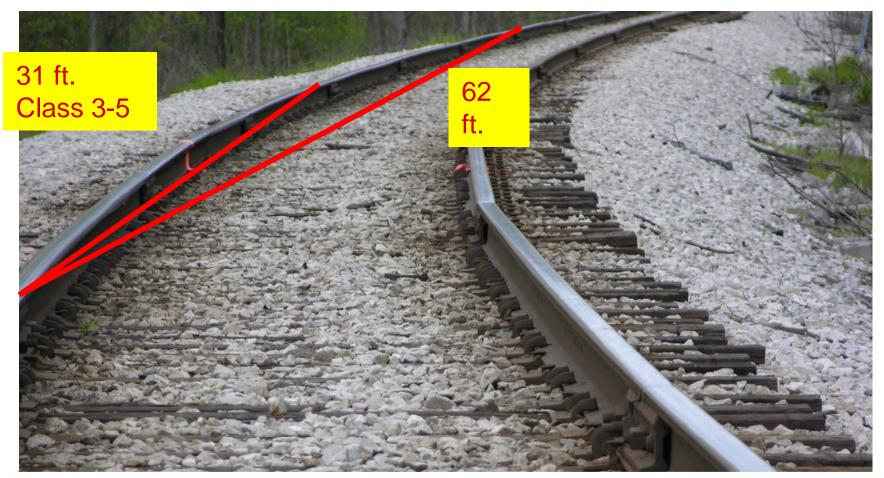

^[1] The ends of the line must be at points on the gage side of the line rail, five-eights of an inch below the top of the railhead. Either rail may be used as the line rail, however, the same rail must be used for the full length of that tangential segment of track.

^[2] The ends of the chord must be at points on the gage side of the outer rail, five-eighths of an inch below the top of the railhead.

^[3] N/A - Not Applicable

In Classes 3 through 5, both the 31-foot and 62-foot chords must be used, and corresponding measurements must be calculated to determine compliance with the required alinement thresholds. If alinement defects are found using both the 31-foot and the 62-foot chord, the inspector should report the item as one defect and note that the defect does not comply with the requirements for the second chord, e.g., "13/4 inches alinement deviation on curved track for 62-foot chord. Note: 1% inches alinement deviation for 31-foot chord at this location."

A 31' chord may pick up short wavelength deviations

62' chord may not pick up short wavelength deviations

Why use a 31 ft. chord in certain situations?

- 1. Short wavelength deviations
- 2. Higher degree curves, easier to measure
- 3. Must use 31' chord for Class 3-5
- 4. Easier to measure in high winds

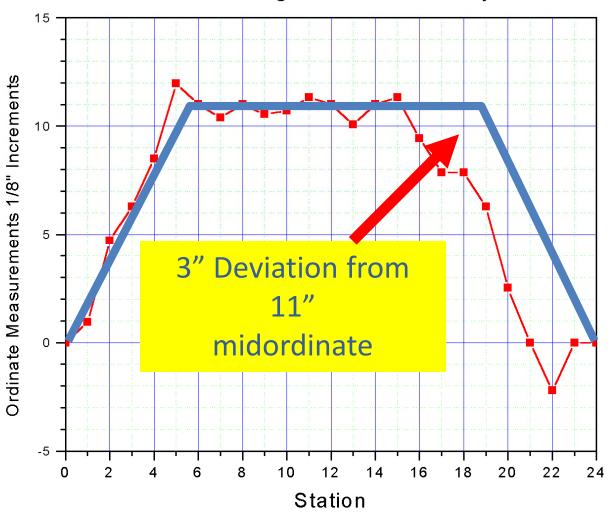

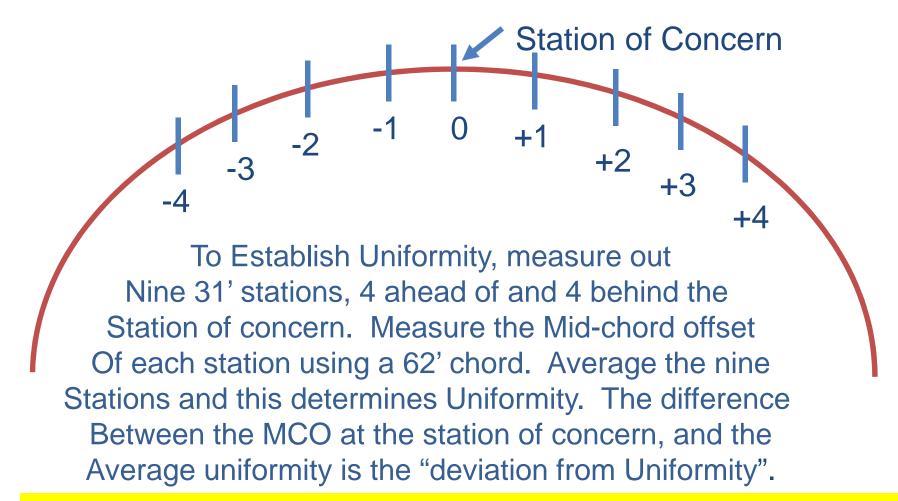

Curve Alignment Geometry

Determining compliance with FRA Alignment Standard using 9 point averaging method

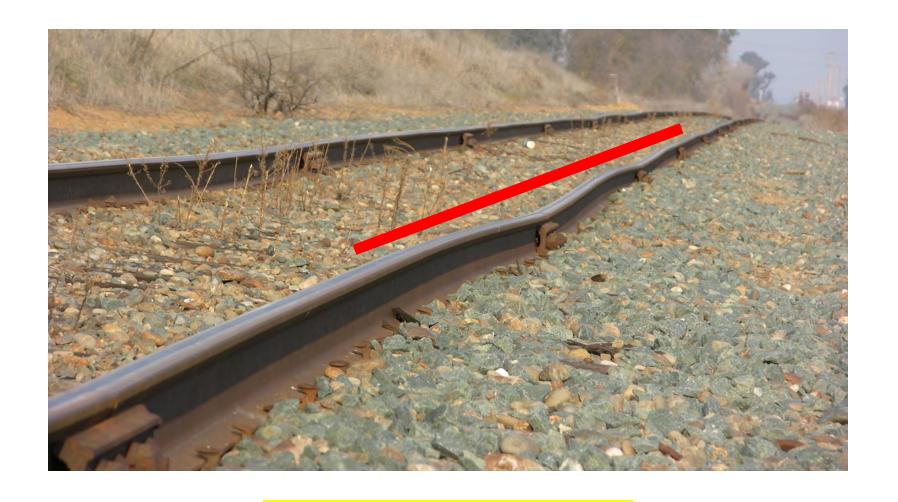

(a) Except as provided in paragraph (b) of this section, each track owner shall maintain the surface of its track within the limits prescribed in the following table:

Track curface (inches)	Class of track					
Track surface (inches)	1	2	3	4	5	
The runoff in any 31 feet of rail at the end of a raise may not be more than	3 1/2	3	2	1 1/2	1	
The deviation from uniform profile on either rail at the mid-ordinate of a 62-foot chord may not be more than	3	2 3/4	2 1/4	2	1 1/4	
The deviation from zero crosslevel at any point on tangent or reverse crosslevel elevation on curves may not be more than	3	2	1 3/4	1 1/4	1	
The difference in crosslevel between any two points less than 62 feet apart may not be more than* 12	3	2 1/4	2	1 3/4	1 1/2	
*Where determined by engineering decision prior to June 22, 1998, due to physical restrictions on spiral length and operating practices and experience, the variation in crosslevel on spirals per 31 feet may not be more than	2	1 3/4	1 1/4	1	3/4	

¹Except as limited by § 213.57(a), where the elevation at any point in a curve equals or exceeds 6 inches, the difference in crosslevel within 62 feet between that point and a point with greater elevation may not be more than 11/2 inches.

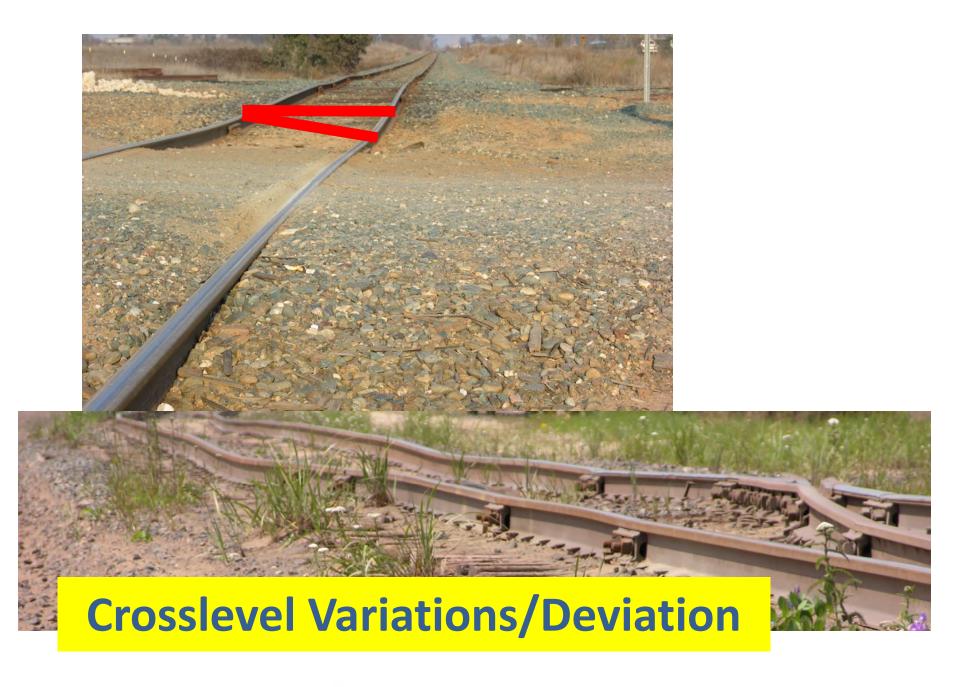

Vertical Profile

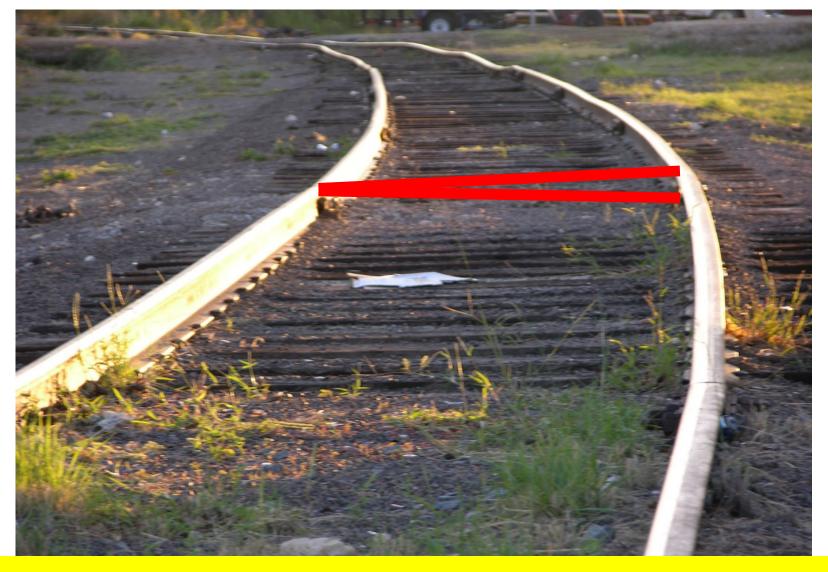

Curve Superelevation and Crosslevel

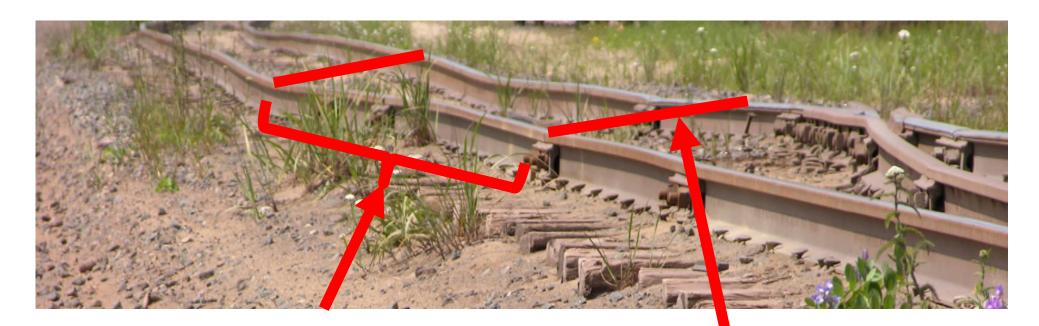

2 Key Words Used in the FRA Regulations

- 1. Variation or Difference
- 2. Deviation

They sound similar, but have different; yet, important, meanings.

This is a <u>variance or difference</u> in two Crosslevel measurements over 62'. Variations are relative differences between any two measurements.

This is a <u>deviation</u> from zero Crosslevel; or a deviation from where the Crosslevel should be. Deviations are singular measurements.

§ 213.13 Measuring track not under load.

When unloaded track is measured to determine compliance with requirements of this part, the amount of rail movement, if any, that occurs while the track is loaded must be added to the measurements of the unloaded track.

(a) Except as provided in paragraph (b) of this section, each track owner shall maintain the surface of its track within the limits prescribed in the following table:

Track surface (inches)	Class of track					
	1	2	3	4	5	
The runoff in any 31 feet of rail at the end of a raise may not be more than	3 1/2	3	2	1 1/2	1	
The deviation from uniform profile on either rail at the mid-ordinate of a 62-foot chord may not be more than	3	2 3/4	2 1/4	2	1 1/4	
The deviation from zero crosslevel at any point on tangent or reverse crosslevel elevation on curves may not be more than	3	2	1 3/4	1 1/4	1	
The difference in crosslevel between any two points less than 62 feet apart may not be more than* 12	3	2 1/4	2	1 3/4	1 1/2	
*Where determined by engineering decision prior to June 22, 1998, due to physical restrictions on spiral length and operating practices and experience, the variation in crosslevel on spirals per 31 feet may not be more than	2	1 3/4	1 1/4	1	3/4	

¹Except as limited by § 213.57(a), where the elevation at any point in a curve equals or exceeds 6 inches, the difference in crosslevel within 62 feet between that point and a point with greater elevation may not be more than 11/2 inches.

Crosslevel Variations

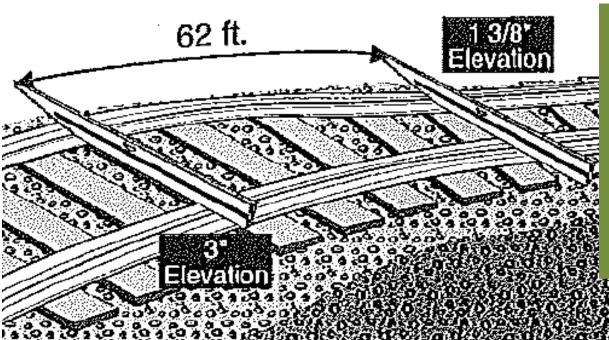

Any two Crosslevel measurements less than 62' apart

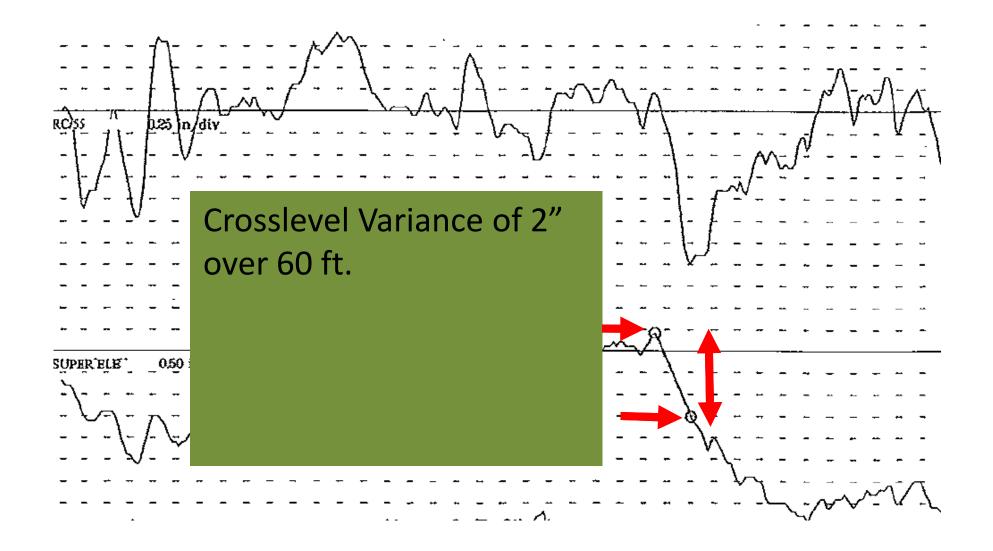

Crosslevel Variance over any two points less than 62 ft. apart.

3'' - 13/8'' = 15/8''

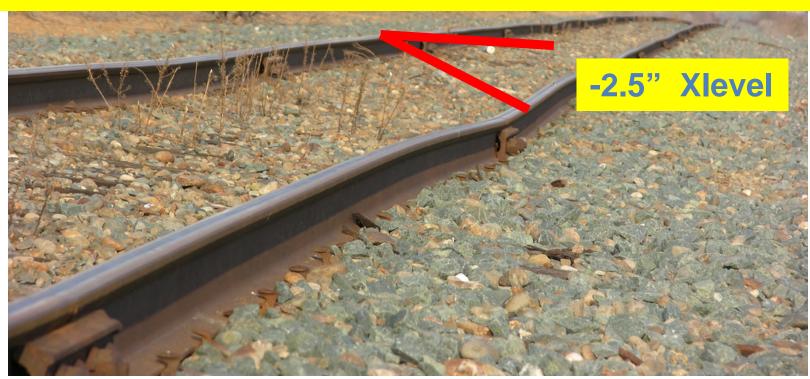

(a) Except as provided in paragraph (b) of this section, each track owner shall maintain the surface of its track within the limits prescribed in the following table:

Track surface (inches)	Class of track				
Track surface (miches)		2	3	4	5
The runoff in any 31 feet of rail at the end of a raise may not be more than	3 1/2	3	2	1 1/2	1
The deviation from uniform profile on either rail at the mid-ordinate of a 62-foot chord may not be more than	3	2 3/4	2 1/4	2	1 1/4
The deviation from zero crosslevel at any point on tangent or reverse crosslevel elevation on curves may not be more than	3	2	1 3/4	1 1/4	1
The difference in crosslevel between any two points less than 62 feet apart may not be more than* 12	3	2 1/4	2	1 3/4	1 1/2
*Where determined by engineering decision prior to June 22, 1998, due to physical restrictions on spiral length and operating practices and experience, the variation in crosslevel on spirals per 31 feet may not be more than	2	1 3/4	1 1/4	1	3/4

¹Except as limited by § 213.57(a), where the elevation at any point in a curve equals or exceeds 6 inches, the difference in crosslevel within 62 feet between that point and a point with greater elevation may not be more than 11/2 inches.

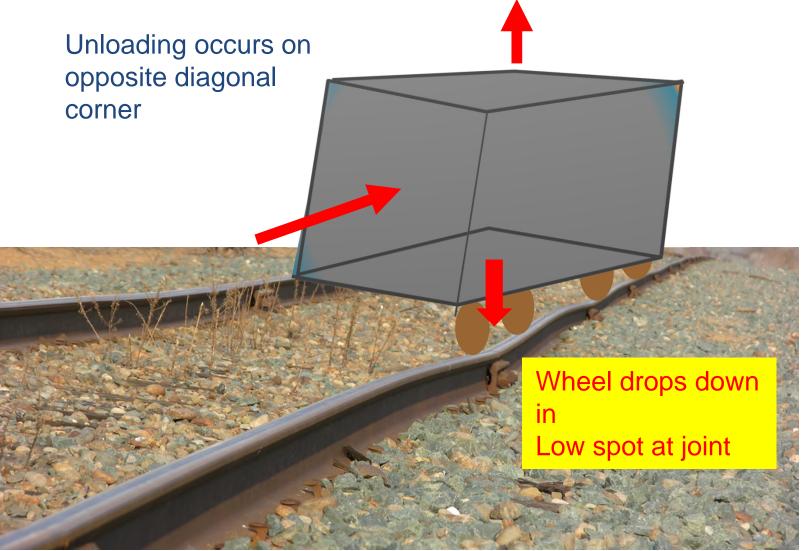

Crosslevel Deviations

Deviation from Zero Crosslevel at any point on tangent, or reverse crosslevel in curves may not be more than

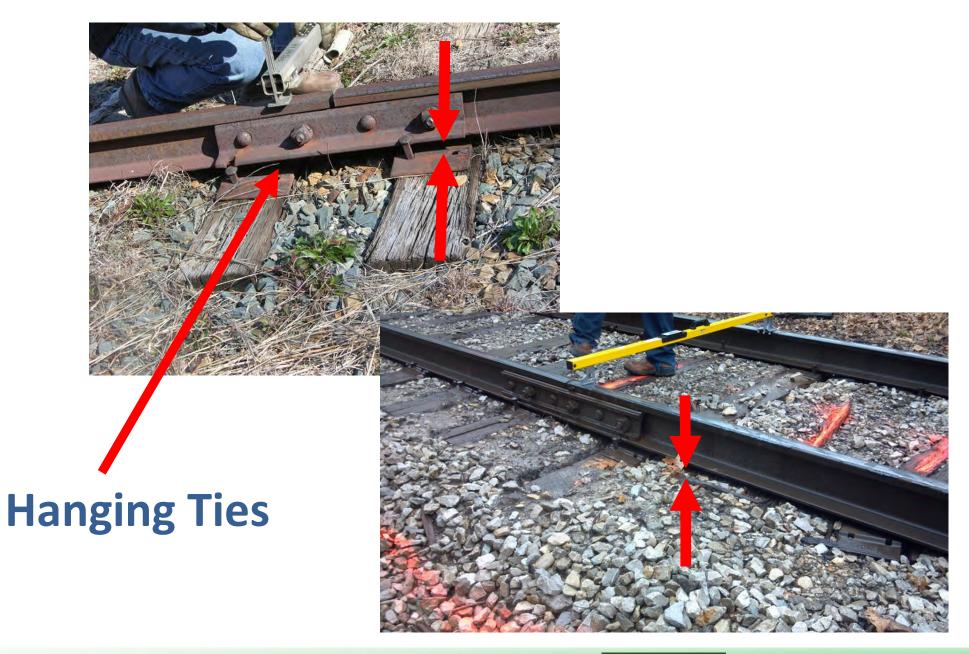

Class	5	4	3	2	1
- Deviation	1 " c	1 1/4"	1 3/4"	2"	3"

Wheel Unloading/Lift due to Crosslevel Variation **Between rear and front trucks**

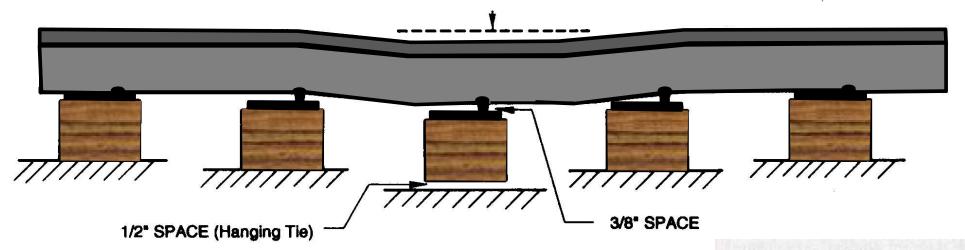

MEASURED CROSSLEVEL 1"

MEASURED CROSS LEVEL 1"
SPACE UNDER TIE PLATE 3/8"
SPACE UNDER TIE 1/2"

ACTUAL CROSSLEVEL UNDER LOAD 1 7/8"

§ 213.13 Measuring track not under load.

When unloaded track is measured to determine compliance with requirements of this part, the amount of rail movement, if any, that occurs while the track is loaded must be added to the measurements of the unloaded track.

MEASURING CROSSLEVEL NOT UNDER LOAD

(a) Except as provided in paragraph (b) of this section, each track owner shall maintain the surface of its track within the limits prescribed in the

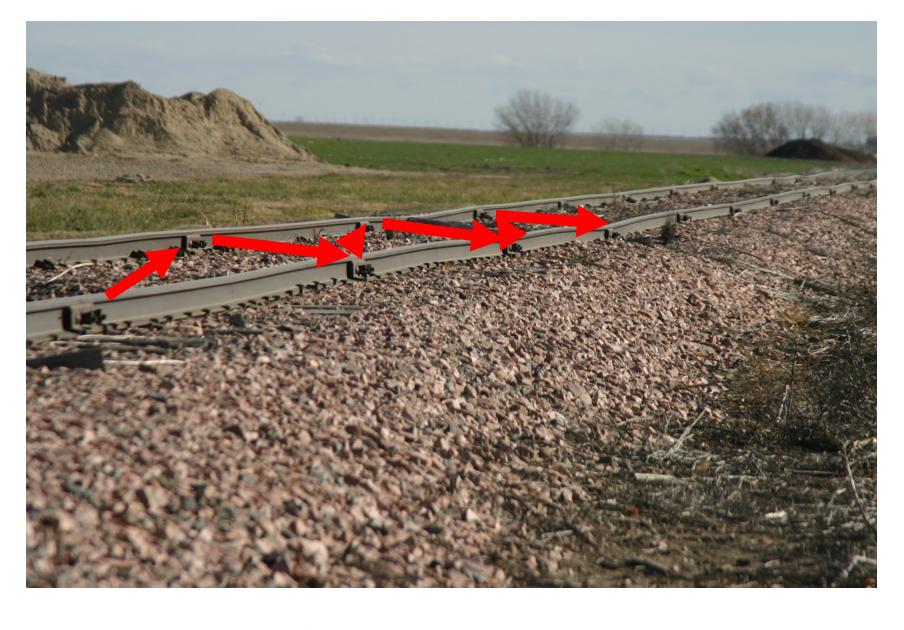

following table:

Track surface (inches)	Class of track				
rrack surface (iliches)	1	2	3	4	5
The runoff in any 31 feet of rail at the end of a raise may not be more than	3 1/2	3	2	1 1/2	1
The deviation from uniform profile on either rail at the mid-ordinate of a 62-foot chord may not be more than	3	2 3/4	2 1/4	2	1 1/4
The deviation from zero crosslevel at any point on tangent or reverse crosslevel elevation on curves may not be more than	3	2	1 3/4	1 1/4	1
The difference in crosslevel between any two points less than 62 feet apart may not be more than* 12	3	2 1/4	2	1 3/4	1 1/2
*Where determined by engineering decision prior to June 22, 1998, due to physical restrictions on spiral length and operating practices and experience, the variation in crosslevel on spirals per 31 feet may not be more than	2	1 3/4	1 1/4	1	3/4

¹Except as limited by § 213.57(a), where the elevation at any point in a curve equals or exceeds 6 inches, the difference in crosslevel within 62 feet between that point and a point with greater elevation may not be more than 11/2 inches.

Staggered Jointed Rail (Joints staggered greater than 10' apart)

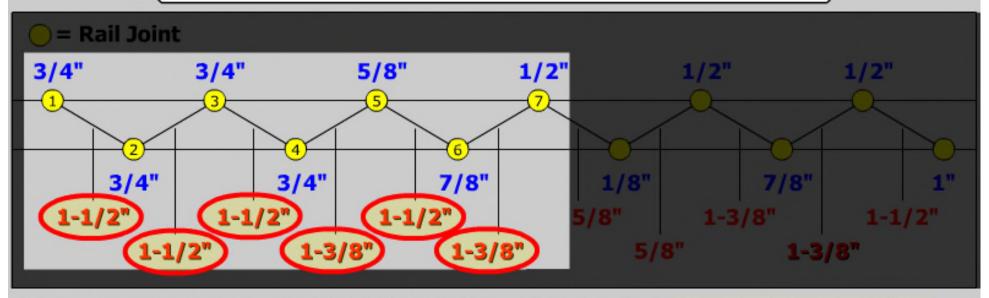

FRA - Harmonic Rock-Off II

In this case, Deficient Track Crosslevel, could be considered a potential Primary Derailment Cause.

(a) Except as provided in paragraph (b) of this section, each track owner shall maintain the surface of its track within the limits prescribed in the following table:

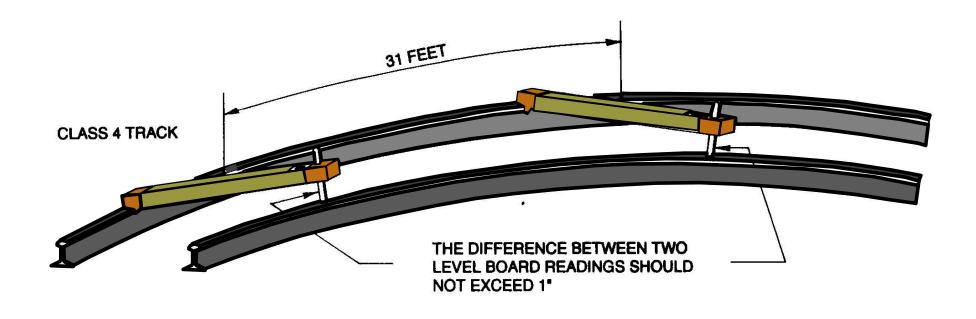

Track surface (inches)		Class of track					
Track surface (iliches)	1	2	3	4	5		
The runoff in any 31 feet of rail at the end of a raise may not be more than	3 1/2	3	2	1 1/2	1		
The deviation from uniform profile on either rail at the mid-ordinate of a 62-foot chord may not be more than	3	2 3/4	2 1/4	2	1 1/4		
The deviation from zero crosslevel at any point on tangent or reverse crosslevel elevation on curves may not be more than	3	2	1 3/4	1 1/4	1		
The difference in crosslevel between any two points less than 62 feet apart may not be more than* 12	3	2 1/4	2	1 3/4	1 1/2		
*Where determined by engineering decision prior to June 22, 1998, due to physical restrictions on spiral length and operating practices and experience, the variation in crosslevel on spirals per 31 feet may not be more than	2	1 3/4	1 1/4	1	3/4		

¹Except as limited by § 213.57(a), where the elevation at any point in a curve equals or exceeds 6 inches, the difference in crosslevel within 62 feet between that point and a point with greater elevation may not be more than 11/2 inches.

Multiple Defects in Succession

§ 213.1 Scope of part.

This part prescribes minimum safety requirements for railroad track that is part of the general railroad system of transportation. The requirements prescribed in this part apply to specific track conditions existing in isolation. Therefore, a combination of track conditions, none of which individually amounts to a deviation from the requirements in this part, may require remedial action to provide for safe operations over that track. This part does not restrict a railroad from adopting and enforcing additional or more stringent requirements not inconsistent with this part.
