

# Vehicle-Track Measurement Technologies

Matthew Dick, P.E.

ENSCO Rail

October 19<sup>th</sup> 2021

# Summary

**Overview of Measurement Systems**

**Detailed Evaluation of Select Technology**

**The Future is Here**

# Overview of Measurement Systems

*There are five basic categories of measurement system.*

# Categories of Measurement Systems

1) Mounted on Vehicle to measure the Vehicle.

# Categories of Measurement Systems

2) Mounted on Track to measure the Track.

# Categories of Measurement Systems

3) Mounted on Vehicle to measure the Track.  
(Manned, Unmanned, and Autonomous)

# Categories of Measurement Systems

4) Mounted on Track to measure the Vehicle.

# Categories of Measurement Systems

5) Mounted on Vehicle to measure the Vehicle & Track.

## Track Measurement

**Rail Profile Measurement System**

**Track Geometry Measurement**

**V/TI Monitor Axle Impact**

**Ultrasonic Rail Flaw Detector**

**Machine Vision**

## Vehicle Measurement

**Wheel Profile Detector**

**Truck Condition Monitor  
(TBOGI)**

**Wheel Impact Load Detector**

**Cracked Wheel Detector**

**Machine Vision**

## Track Measurement

## Vehicle Measurement

**Rail Profile Measurement System**

**Wheel Profile Detector**

**Track Geometry Measurement**

**Truck Condition Monitor  
(TBOGI)**

**V/TI Monitor Axle Impact**

**Wheel Impact Load Detector**

Ultrasonic Rail Flaw Detector

Spoked Wheel Detector

Machine Vision

Machine Vision

**WRI 2019**

# Location Determination

# 1) Global Navigation Satellite System (GNSS)

Uses all satellites, not just the USA ones (aka GPS)

More satellites means more accuracy

GPS is a single satellite system that utilizes 31 satellites

VS

GNSS utilizes 89 satellites from all 4 satellite systems

Ref: [https://www.everythingrf.com/community/what-is-the-difference-between-gnss-and-gps\\_58](https://www.everythingrf.com/community/what-is-the-difference-between-gnss-and-gps_58)

## 2) Correction Services:

“Extra stuff beyond the GNSS satellites to increase accuracy”

Correction Service Type:	Pros	Cons
Wide Area Augmentation System (WAAS)	Free	Lowest accuracy
Precise Point Positioning (PPP)	Available Worldwide Lowest Paid Service Price	
Real-Time Kinematic (RTK)	Highest Accuracy	Only available locally and base stations generally needs to be built by railway. Base stations every 10~20 kilometers
Hybrid RTK-PPP	Lower cost than RTK with base stations spread further apart	Higher cost than PPP. Lower accuracy than RTK Still requires RTK infrastructure

### 3) GNSS Accuracy

The accuracy of this...

... is the not the same on this!

Be cautious assuming a GNSS receiver's data sheet accuracy is what you would get on a railway vehicle.

## 4) Inertial Correction

Uses inertial sensors to perform “dead reckoning” in GNSS denied locations.

Fills in “gaps” of missing GNSS information in tunnels and mountain cuts.

## 5) RFID Tags

Used when no GNSS is available at all  
(like subway tunnels)

Install in track centerline

Where RFID tags are installed on the  
network is important

Use Passive instead of Active tags

## 6) Wheel Tachometer (aka Encoder)

Backbone of location determination system.

Needs to be recalibrated whenever the wheel diameter changes, such as:

- Wheel Wear
- Wheel being turned

Increased focus on wheel tachometer accuracy

# Imaging

PRINCIPLES COURSE • OCTOBER 19, 2021

**WRI 2021**

# Cameras

## “Line Scan” Cameras aka “Slit Scan”

Works like your document scanner

## “Area Scan” Cameras aka “Full Frame”

Works like your standard camera

# Cameras

Line Scan Sensor

Area Scan Sensor

Light is converted to electricity similar to a solar cell.

Imagery sensors are like a grid of very tiny solar cells.

# Cameras

Ref: <http://www.physics.byu.edu/faculty/colton/courses/phy123-fall12/warmups/jitt30a.html>

# Cameras

Ref: <https://www.ormsdirect.co.za/blog/2012/05/08/what-is-aperture-desmond-louw-explains/>

# Cameras

*What is needed for a railroad application:*

Ideally want **large depth of field (small aperture)** for maximum content in focus.

Want **fast shutter speed** to capture quickly moving objects.

Generally **need lots of light.**

Curvature (deg)

Crosslevel (in)

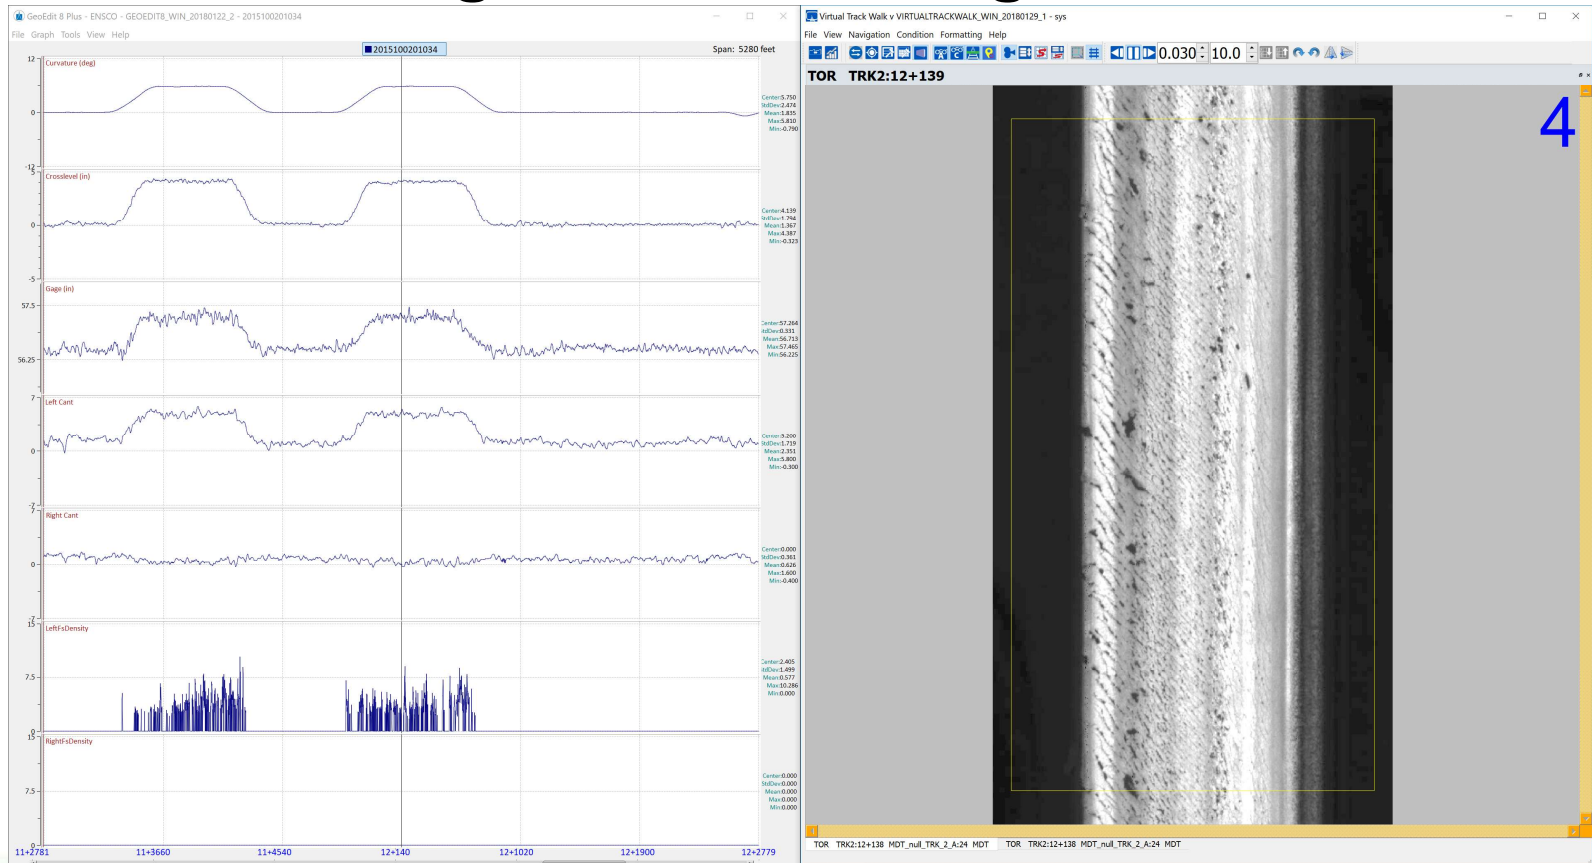

Gage (in)

L Cant (deg)

R Cant (deg)

L FS Crack Density

R FS Crack Density

# Machine Vision Algorithm Development

A current popular method is Deep Learning Neural Networks

Less dependent on feature extraction

More dependent on lots of labeled training images

# Laser Profiling and LiDAR

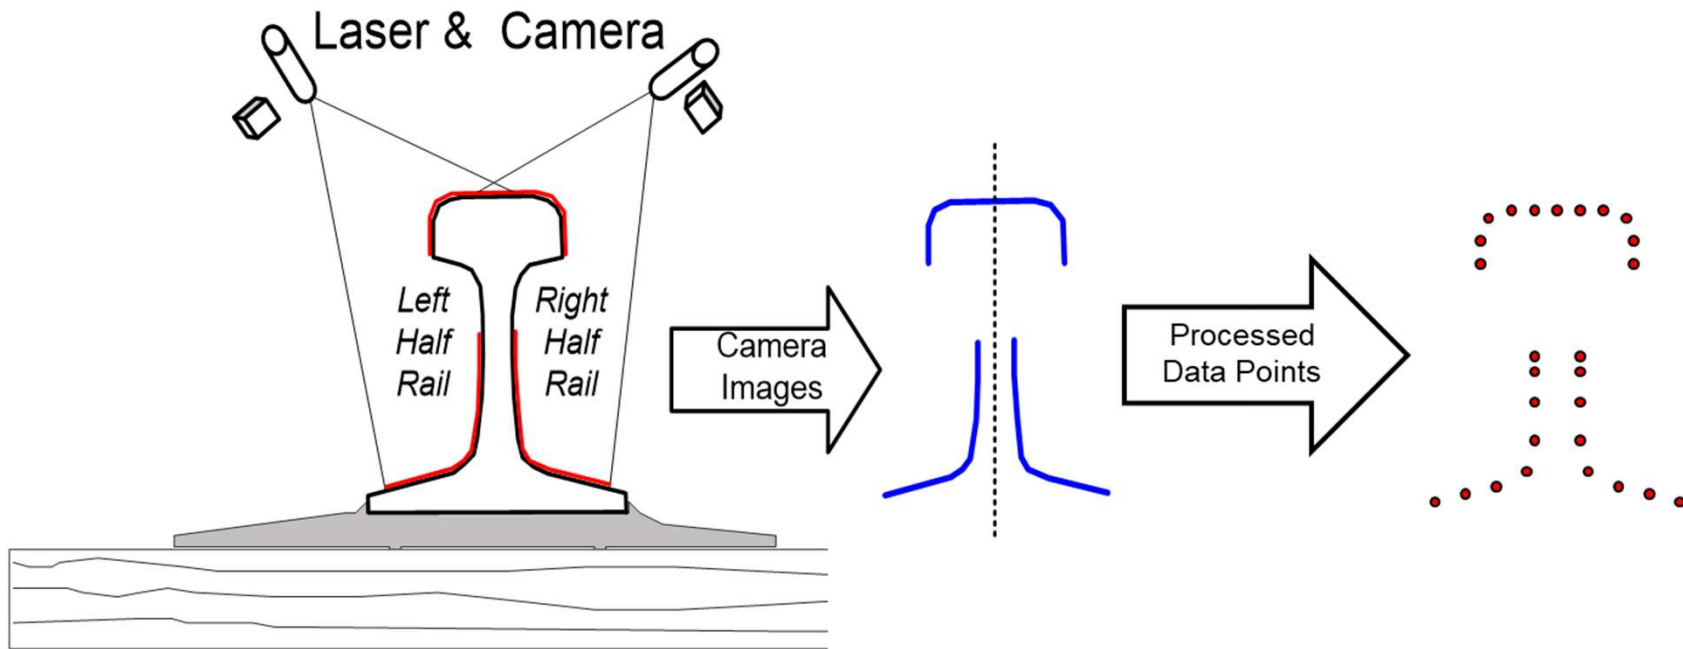

# Laser Triangulation Measurement

# Laser Triangulation Measurement

# Laser Triangulation Measurement: Rail Profile Measurement

# Laser Triangulation Measurement: 3D Profiling

High Sample Rate Scan at Frog

High Sample Rate Scan on Wheel Tread

# Laser Triangulation Measurement: 3D Profiling

Track Bed 3D Laser Profile

Coal in Coal Hopper 3D Laser Profile

# LiDAR Basics

PRINCIPLES COURSE • OCTOBER 19, 2021

**WRI 2021**

# LiDAR Basics

Laser is emitted

# LiDAR Basics

Laser is emitted

Laser bounces off surface

Travel time is measured  
and converted to distance

# Clearance Measurement

LiDAR works by shooting a laser point and measuring the time it takes to return.

# Clearance Measurement

Rotating this laser at a fast speed allows it to measure everything around the vehicle.

# Clearance Measurement

Rotating this laser at a fast speed allows it to measure everything around the vehicle.

# Clearance Measurement

Rotating this laser at a fast speed allows it to measure everything around the vehicle.

7 in North America in Q1 2022

**Carbody  
Mounted  
Autonomous  
Joint Bar  
Imaging**

## 2) Reducing Field Visual Inspections

Regulators are issuing waivers for reduced field visual inspections.

Increased automated inspection is required to reduce field visual inspections.

# 3) Digital Twin

## Definition:

A **digital twin** is a virtual representation that serves as the real-time digital counterpart of a physical object or process.

Gain insights for improvements

What-if analysis

Real-time operation modifications

Ref: <https://www.railexpress.com.au/going-data-insights-the-value-digital-twin-rail/>
