Advancements in Friction Management Consumable Products

Louisa Stanlake, Ph.D.

Global Product Manager - Consumables

HEAVY HAUL SEMINAR · JUNE 23 - 24

Outline

- Background
- Trackside Top-of Rail (TOR) Advancements
- On-Board TOR Product Advancements
- Gauge Face (GF) Product Advancements

HEAVY HAUL SEMINAR · JUNE 23 - 24

Consumable

- Chemical product applied to the wheel or rail to optimize friction characteristics
- Product is "consumed" under wheel/rail conditions

Segmentation of Consumables

- The Targeted Location:
 - Top of Rail/Wheel Tread
 - Gauge Face/Wheel Flange
- The Application:
 - Trackside
 - On-Board

HEAVY HAUL SEMINAR · JUNE 23 - 24

Consumables Overview

		APPLICATION METHOD	
		Trackside	On-Board
N LOCATION	Top of Rail / Wheel Tread	- Friction Modifiers - Hybrids - Top-of-Rail (TOR) Oils	 TOR Friction Modifier Spray Solid Friction Modifier Wheel Tread Application
APPLICATION LOCATION	Gauge Face / Wheel Flange	- Gauge Face (GF) Greases	 Solid Lubricants for Wheel Flange Application On-Board Oil Spray

HEAVY HAUL SEMINAR · JUNE 23 - 24

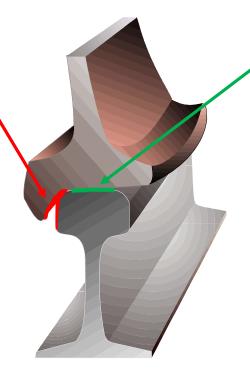

Benefits of Using Consumables

Gauge Face / Wheel Flange

Benefits:

- Reduced Rail / Wheel Wear
- Improved Fuel Efficiency
- Lowers Derailment Potential
- Mitigates RCF Development
- Reduced Flange Noise

Target CoF: < 0.25

Top-of-Rail / Wheel Tread

Benefits:

- Reduced Rail / Wheel Wear
- Improved Fuel Efficiency
- Reduced Lateral Forces
- Lowers Derailment Potential
- Mitigates RCF Development
- Reduces Hunting
- Mitigates Noise

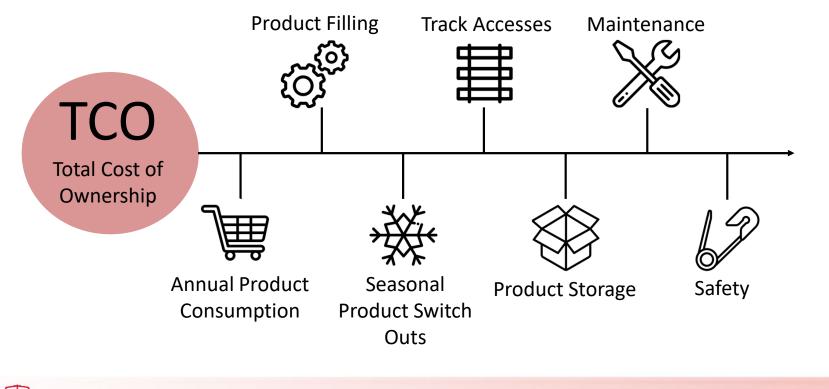

Target CoF: ~0.35

CoF = Coefficient of Friction

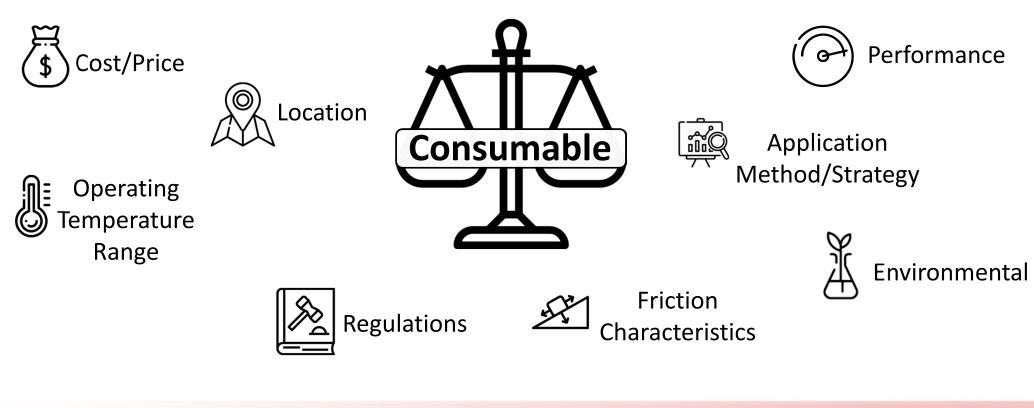

HEAVY HAUL SEMINAR · JUNE 23 - 24

Consumable Advancement

Consumable Advancement

HEAVY HAUL SEMINAR · JUNE 23 - 24

Advances in Consumables Themes

- All-season products
- Premium raw materials leading to higher performance

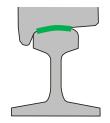

• Environmental considerations

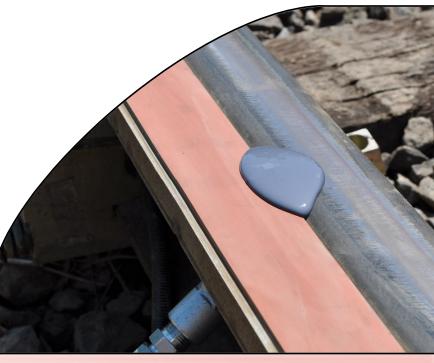

HEAVY HAUL SEMINAR · JUNE 23 - 24

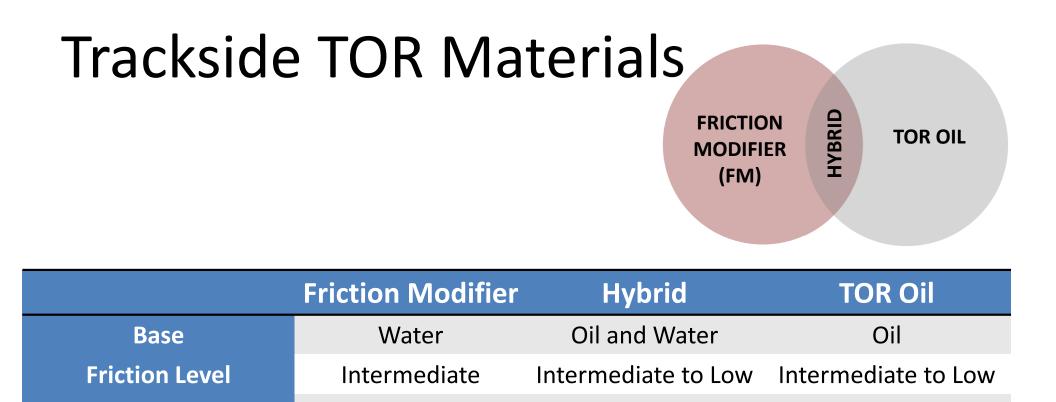

TOR PRODUCTS TRACKSIDE APPLICATION

HEAVY HAUL SEMINAR · JUNE 23 - 24

Non-drying

Yes

Drying Characteristics

All-Season Available?

HEAVY HAUL SEMINAR · JUNE 23 - 24

Dry film

Yes

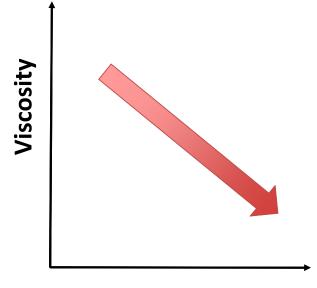

LBFoster WRI 2022

Non-drying

Yes

Why do we have seasonal products?

- Diverse operating temperatures
 40 to 50°C,-40 to 122°F
- Seasonal products are used to maintain consistent application for their respective seasons
- All water and oil-containing materials will follow trend for viscosity vs temperature

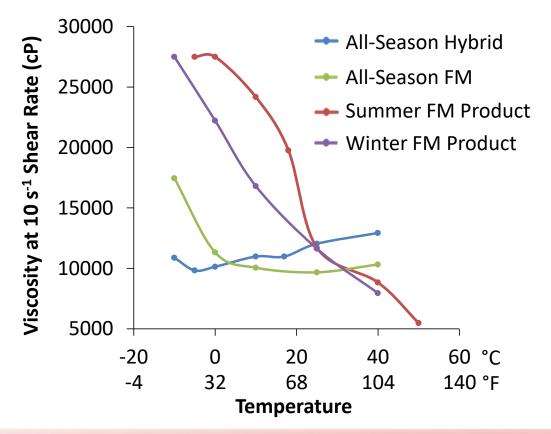

Temperature

HEAVY HAUL SEMINAR · JUNE 23 - 24

Viscosity-Temperature Relationship

- Flat viscosity-temperature relationship leads to:
 - Consistent carry down and adhesion properties
 - Consistent product output
 - Better product stability in tanks

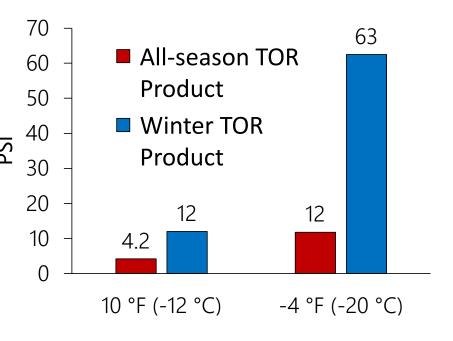

HEAVY HAUL SEMINAR · JUNE 23 - 24

Low Temperature Pumpability

- Low pressure viscometer simulates trackside pumpability
- All Season requires less pressure than the Winter product → easier to pump in colder temperatures
- Improved low temperature pumpability results in faster fill times

Pressure Viscometer Data

LBFoster WRI 2022

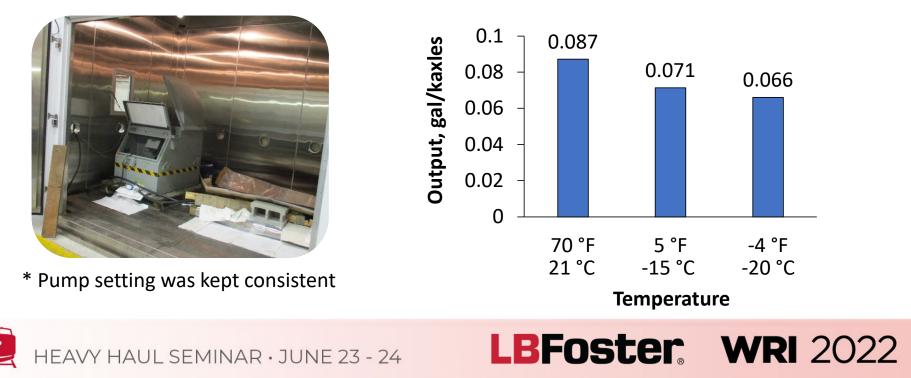

HEAVY HAUL SEMINAR · JUNE 23 - 24

14

Low Temperature Pumpability

- Low temperature pumpability also assessed using a cold chamber*
- All Season TOR FM product has minimal volumetric output changes

High Temperature Properties

- Product stability in higher temperatures
 - Standardized test, 1 week
 temperature cycling, -18 to 70 °C,
 0 to 158 °F
- Optimized carry down transfer mechanism
- Adhesion to hot rails (drying time)

Stable Product

Unstable Product

HEAVY HAUL SEMINAR · JUNE 23 - 24

All-Season TOR Product Comparison

- Field trial conducted to determine All-Season product performance in direct comparison to a Winter FM
- Laboratory results for trial products:

Properties	All-Season FM	All-Season Hybrid	Winter FM
Base	Water	Oil and water	Water
Freezing Point °C (°F)	-30 (-22)	-25 (-13)	-16 (3.2)
High Temperature Properties	Good	Good	Inadequate
Low Temperature Properties	Good	Good	Good

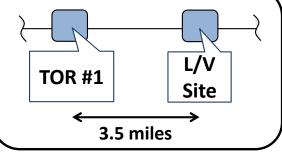

HEAVY HAUL SEMINAR · JUNE 23 - 24

TOR All-Season Product Trial Location

- River grade, bidirectional traffic
- Environmental temperatures between:
 - 10 and -25 °C with and average of -8 °C
 - 50 and -14 °F with an average of 17 °F
- 8°08' instrumented curve

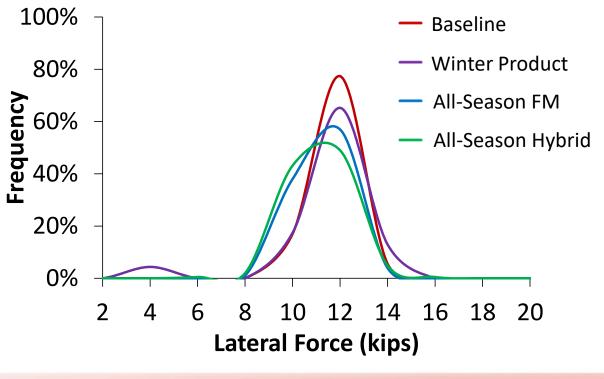

HEAVY HAUL SEMINAR · JUNE 23 - 24

TOR All-Season Trial

- All-season FM and Hybrid have comparable results
 - Both improved over
 Winter product

HEAVY HAUL SEMINAR · JUNE 23 - 24

Demonstrated All-Season Performance

- All-season Friction Modifier has been observed over a few years in different territories:
 - Dry desert-like location with above 32 °C/90 °F summer and -9 °C /15 °F average winter temperatures
 - Mountainous territory with average yearly temps of -10 to 30 °C (14 to 86 °F)
- Product performance was good in all weather conditions:
 - Good pumpability at low temperatures
 - Not too thin in warm temp \rightarrow effective wheel pick up and carry down

HEAVY HAUL SEMINAR · JUNE 23 - 24

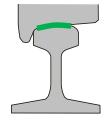

TOR Trackside Consumable Advancement

- Advances in TOR product led to enhanced performance
 - Demonstrated all-season use
 - Longer product carry down over seasonal product
- Consumable advances drive lower TCO:
 - Less site visits for product switchover and filling
 - High-quality coverage in shoulder seasons
 - Less product to manage and inventory

HEAVY HAUL SEMINAR · JUNE 23 - 24

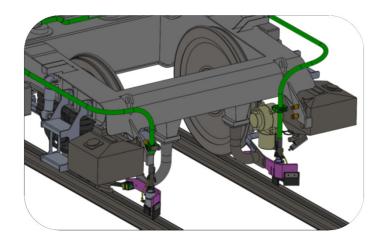

TOR CONSUMABLE PRODUCTS ON-BOARD APPLICATION

HEAVY HAUL SEMINAR · JUNE 23 - 24

On-Board TOR Consumable

Water-based friction modifier material sprayed direct to the TOR

- Same benefits as trackside application
- Product is continuously /selectively applied to the TOR
 - ~3-5% in energy reduction
 - Reduction in lateral forces in curves
 - Reduction in wheel tread wear and tread defects

HEAVY HAUL SEMINAR · JUNE 23 - 24

On-Board TOR FM Application

- Historically, systems use heating due to freezing point of the consumable
- All-season material development:
 - Provides wider operating temperature range without heating
 - Reduces unit price of the system
 - Reduction in life cycle cost
 - Reduction in unplanned maintenance activities
 - Improvement in overall uptime of system

HEAVY HAUL SEMINAR · JUNE 23 - 24

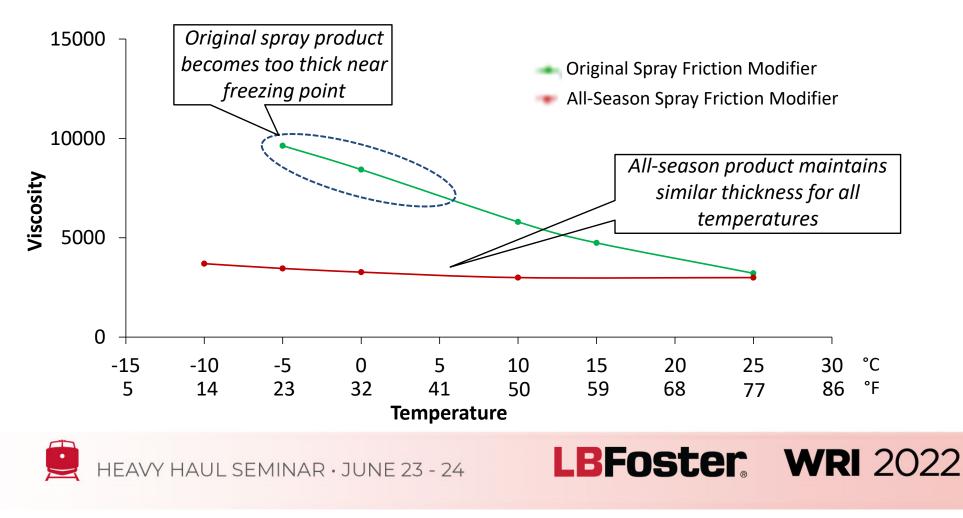

Trackside vs On-Board Consumable

HEAVY HAUL SEMINAR · JUNE 23 - 24

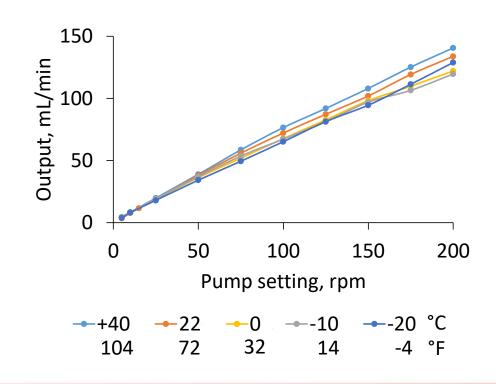

All-season TOR Spray

Product Output

• Stable output vs. temperature

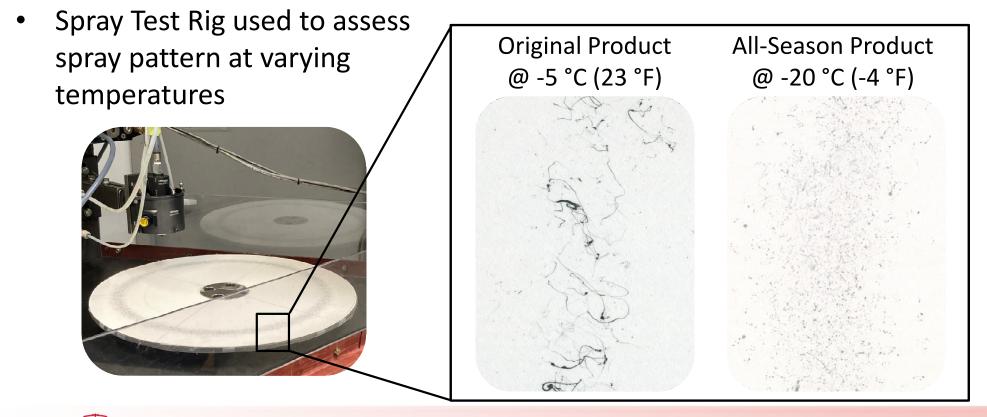

HEAVY HAUL SEMINAR · JUNE 23 - 24

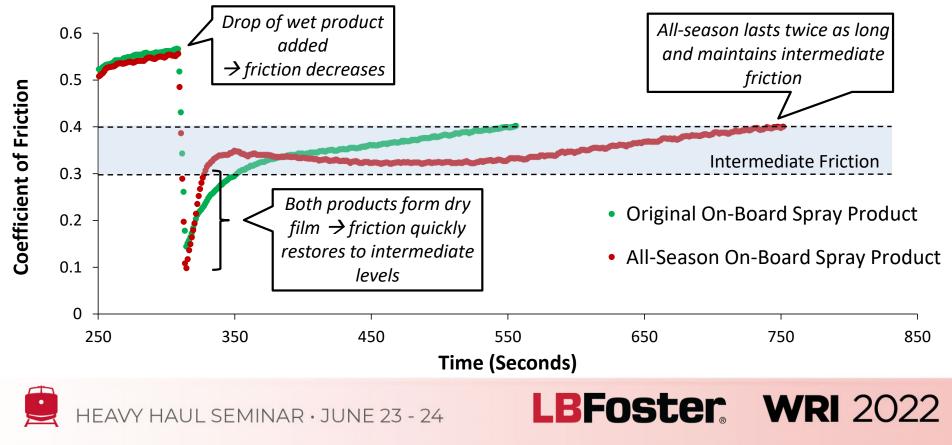

Spray Quality

Performance Testing

• Premium raw materials were added to improve performance

On-Board TOR Formulation Development

- Advancements in raw material development has led to more environmentally friendly offsets
- Latest technology of additives used in all-season TOR spray product

HEAVY HAUL SEMINAR · JUNE 23 - 24

On-Board TOR Development

- Premium raw materials led to increase performance
 - Optimized spray quality for operating temperature range
 - Use of environmentally friendly raw material replacements
- Consumable advances drive lower TCO/Life Cycle Cost:
 - Reduced maintenance (simpler system)
 - Lower cost for application equipment

HEAVY HAUL SEMINAR · JUNE 23 - 24

GAUGE FACE (GF) PRODUCTS TRACKSIDE APPLICATION

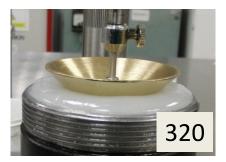

HEAVY HAUL SEMINAR · JUNE 23 - 24

Grades of GF Grease

- The consistency of a grease will harden with lower temperatures and soften with high temperatures
- All-season greases must have flat viscosity vs temperature profiles

Season	Penetration	NLGI Grade	Analogy
Summer	265-295	2	Peanut Butter
Winter	310-340	1	Tomato Paste
All-season	295-330	1 to 1.5	-

HEAVY HAUL SEMINAR · JUNE 23 - 24

Seasonality

Grease features at hot temperatures

- Acceptable product thickness (not too thin)
- Acceptable oil separation
- Low propensity for bar clogging
- Good adherence to hot rails and wheels

Grease features at cold temperatures

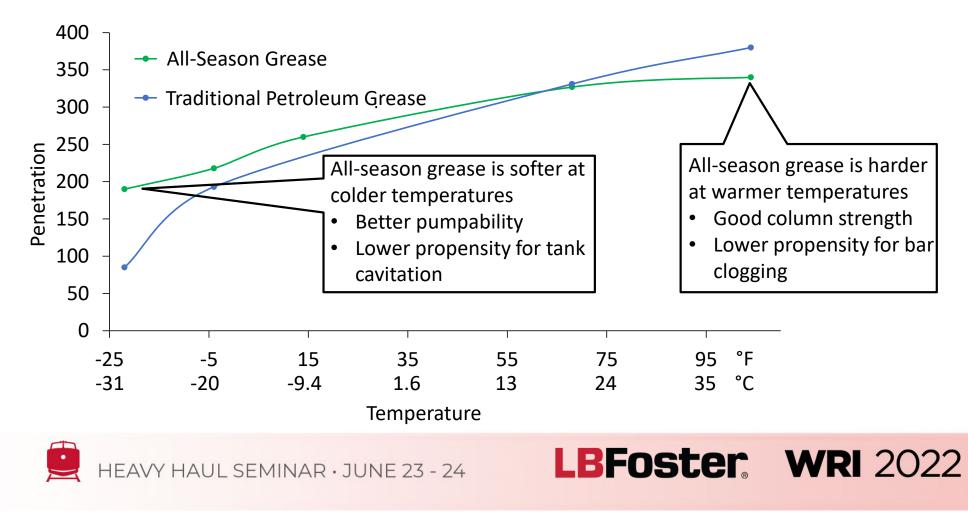

- Good grease pumpability
- Acceptable tank cavitation
- Consistent product volumetric output as a function of temperature
- Good adherence to cold rails and wheels

HEAVY HAUL SEMINAR · JUNE 23 - 24

Penetration vs Temperature

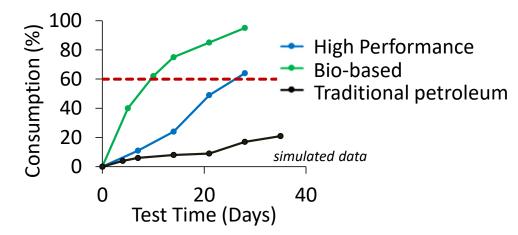

Environmental Considerations

- Three levels of oil-based product biodegradability*
 - "Ready" Material will be consumed quickly in the environment
 - "Ultimately" Complete breakdown of material will eventually be achieved
 - "Inherently" Some degradation is seen, but full breakdown of material will take years

*As per OECD 301B Test for Biodegradability

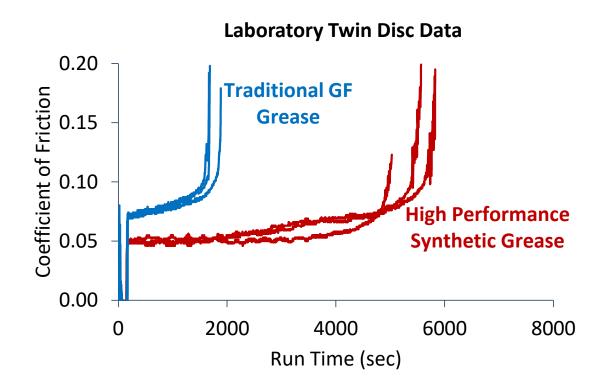

HEAVY HAUL SEMINAR · JUNE 23 - 24

Grease Type	Biodegradability	
Traditional petroleum	Inherently	
Bio-based	Ready	
High performance synthetic	Ultimately	

Advances in GF Grease Technology

- Premium raw materials are used in high performance synthetic grease
- Synthetic grease has better durability
 - Potential for reduced application rate to achieve benefits

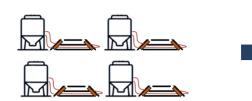

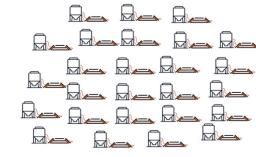

HEAVY HAUL SEMINAR · JUNE 23 - 24

Advances in GF Grease Technology

- Assessment of:
 - Product carry down
 - Tank cavitation
 - Bar clogging propensity
 - Pumpability
 - Oil separation in tank

4 Unit Zone Assessment

- Similar assessment in first trial using harsher conditions
 - Loaded traffic
 - Bidirectional traffic
 - Higher temperatures

Subdivision Assessment

- **50%** application rate
- Determine FM benefit
- Wear rate analysis over extended period of time and seasons

HEAVY HAUL SEMINAR · JUNE 23 - 24

Subdivision Wide Assessment

High performance product was used at 50% application of the original seasonal grease

25 GF trackside units filled, 20 curves were monitored over all weather conditions

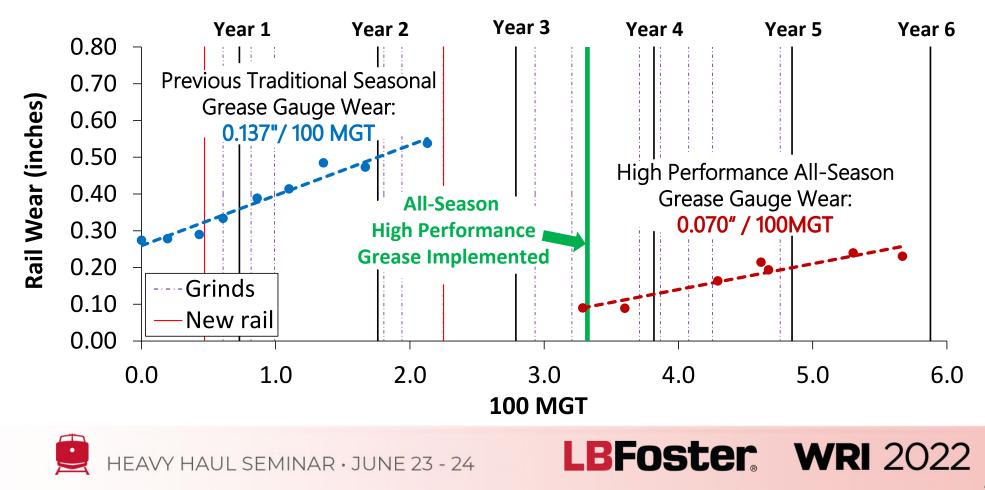

Wear rate analysis (using geometry car data) was used to show effectiveness of grease

HEAVY HAUL SEMINAR · JUNE 23 - 24

Subdivision Field Trial – 7.6° Curve

40

Advanced GF Grease

- Premium raw materials led to increase in performance
 - Benefits can be achieved at 50% application rate
 - Demonstrated all-season use
 - Improved biodegradability rating
- Consumable advances drive lower TCO:
 - Reduced rail wear
 - Lower annual product consumption
 - Significantly less track accesses

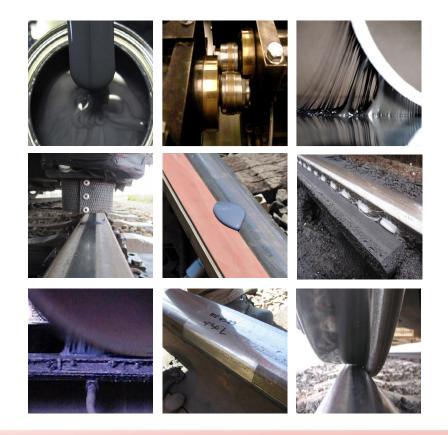

HEAVY HAUL SEMINAR · JUNE 23 - 24

Summary

- Consumable advancement drives a lower TCO
- Major advancements in Consumables are:
 - Demonstrated all-season products
 - Use of premium raw materials for increased performance
 - More environmentally friendly materials
